2 --oOo--

3 P R O C E E D I N G S

4  
5 THE COURT: Good afternoon. Have a seat,  
6 please.

7 COURTROOM ADMINISTRATOR: Today is the date and  
8 time for oral argument regarding Oracle's renewed motion  
9 for permanent injunction, number 1117, and renewed motion  
10 for attorney's fees, number 1118, in civil case  
11 2:10-cv-106-LRH-PAL, Oracle USA, Inc., and others, versus  
12 Rimini Street, Inc., and others.

13 Counsel, can you please state your appearances  
14 for the record.

15 MR. HIXSON: Good afternoon, Your Honor. Tom  
16 Hixson and John Polito from Morgan Lewis for Oracle,  
17 Richard Pocker and Beko Richardson from Boies Schiller  
18 Flexner for Oracle, and James Maroulis, managing counsel at  
19 Oracle for Oracle.

20 THE COURT: All right. Thank you, Mr. Hixson.

21 MR. PERRY: Good afternoon, Your Honor. Mark  
22 Perry from Gibson Dunn for Rimini Street. I'll be arguing  
23 the injunction piece.

24 Dan Polsenberg from Lewis Rocca will be arguing  
25 the fee piece.

1           We also have with us Dan Winslow, the general  
2 counsel of Rimini Street, and Jeffrey Thomas from Gibson  
3 Dunn, who is the partner in the *Rimini II* case, and also  
4 some of my colleagues from Gibson Dunn, and West Allen from  
5 the Howard and Howard firm.

6           Thank you, Your Honor.

7           THE COURT: All right. Thank you.

8           Well, preliminarily, let me say, I welcome you  
9 all back to the courtroom. It brings back memories of  
10 trial.

11           I'm candid to admit I've had more attorneys  
12 admitted in this case than any other case that's ever been  
13 before me. And similarly in court and in practice, we've  
14 had more attorneys attending than -- well, I've had some  
15 cases where we've had as many, but there were more parties  
16 involved.

17           So, well, let me inquire of you, Mr. Hixson and  
18 Mr. Perry. I know I entered the order that we would argue  
19 the injunction side of this first and then the attorney's  
20 fees.

21           Have you, between you, discussed who would be  
22 going first?

23           MR. HIXSON: Oracle is the moving party in both  
24 motions, so we hadn't discussed it, but I assumed that we  
25 would be going first.

1           THE COURT: I would assume so too. But just to  
2 make sure we're all on the same page.

3           And I indicated each side would have up to 45  
4 minutes on each one of the two arguments.

5           And so that takes us to you, Mr. Hixson. You're  
6 welcome to go forward.

7           MR. HIXSON: Good afternoon, Your Honor. As  
8 you've indicated, the Court has given each side 45 minutes  
9 per motion. I would like to reserve 15 minutes of my time  
10 for rebuttal, with the Court's permission.

11          THE COURT: You certainly may.

12          MR. HIXSON: Concerning the permanent  
13 injunction, before I turn to the four eBay factors, I'd  
14 like to address two preliminary issues, and the first is  
15 the meaning of the Ninth Circuit's remand of the injunction  
16 to this Court.

17          The remand is important, but, conceptually  
18 speaking, it's not complicated. When the court of appeals  
19 reviews a decision by you on an injunction matter, they  
20 review it for abuse of discretion. So the court of appeals  
21 wants to know that they're reviewing an exercise that you  
22 did of your discretion.

23          They don't want to guess. They don't want to  
24 predict. They don't want to say, Well, in the situation it  
25 might be similar or different and the judge might have

1 ruled this way. They want to know. They want to know how  
2 you acted in that situation.

3 Here, in 2016, you originally reviewed and  
4 applied the four eBay factors to both Oracle's copyright  
5 infringement claim and our California computer access claim  
6 and applied them together. And that was the context in  
7 which you granted the permanent injunction.

8 The two injunctions were discrete. One was  
9 about the copyright infringement; one was about the  
10 California computer act, as the Ninth Circuit noted, but  
11 you review the eBay factors and your analysis together.

12 Now that the Ninth Circuit has reviewed the  
13 California state access claim, they sent this case back to  
14 you to exercise your discretion under Section 502 of the  
15 Copyright Act, and they want to know what you would do if  
16 presented with copyright infringement alone.

17 And they tell us that explicitly on page 964 of  
18 the opinion where they say:

19 "We do not know how the district court would  
20 weigh the eBay factors with respect to the  
21 copyright claims alone."

22 And that's the scope of the remand. It's a  
23 straightforward issue.

24 Now, Rimini in their briefs tries to make a lot  
25 more of it. They say that the Ninth Circuit remanded with

1 instructions for you to do a lot more work on remand. At  
2 times Rimini even used the words "reversed" to describe  
3 what the Ninth Circuit did with the injunction, when, in  
4 fact, they simply vacated and sent it back.

5 But the Ninth Circuit is clear about what they  
6 want from you, and that's to exercise your discretion when  
7 it's just copyright infringement, are you willing to grant  
8 the permanent injunction.

9 Rimini does say there are hints and suggestions  
10 by the Ninth Circuit that the injunction was too broad,  
11 that it extended to certain product lines it shouldn't have  
12 covered, and things like that.

13 But the Ninth Circuit did not do any of that.  
14 None of that is real. And, in fact, the Ninth Circuit came  
15 right on you and told you that again on page 964 of their  
16 opinion, where they say, quote, We express no view on the  
17 propriety or scope of any injunctive relief, which are  
18 matters committed to the district court's discretion in the  
19 first instance.

20 And so this is an important remand, but it's a  
21 narrow one in scope: Are you willing to do the same thing  
22 when it's just copyright infringement as you did  
23 previously. And we believe that you should.

24 All of the reasons that you listed in your  
25 September 2016 order for granting the permanent injunction

1 continue to apply when it's just a copyright infringement  
2 claim.

3 Oracle has still suffered irreparable harm, the  
4 remedies at law are still inadequate, and the balance of  
5 hardships and the public interest continue to weigh in  
6 favor of Oracle.

7 As a testament to how similar the issues are to  
8 the ones you've previously considered, it's striking that  
9 so many of the arguments in Rimini's opposition brief are  
10 exactly the same ones they raised two years ago with the  
11 Court's prior consideration of the motion. And this helps  
12 demonstrate that the findings and conclusions you made in  
13 2016 continue to support the issuance of a permanent  
14 injunction today.

15 Now, let me turn to the second preliminary  
16 matter I'd like to discuss, which is the most curious  
17 aspect of Rimini's opposition brief.

18 They say that if the Ninth Circuit did not  
19 explicitly reach the merits of an issue, then you can't  
20 enjoin them on that. They don't say why they think that.  
21 They don't say that there's a case that says that. They  
22 don't say there's a statute that says that or any kind of  
23 doctrine or rule.

24 Their brief simply assumes that unless the Ninth  
25 Circuit reached a certain issue, you are powerless to

1       enjoin them for that particular conduct.

2               But we never hear where that assumption comes  
3       from. The brief is just written on that premise. Rimini  
4       is incorrect about that. Under both the rule of mandate  
5       and the law of the case, their argument is wrong.

6               The rule of mandate provides, as the Ninth  
7       Circuit explained in *United States v. Thrasher*, that a  
8       district court cannot revisit its already final  
9       determinations unless the mandate allowed it.

10              And we quoted for Your Honor the discussion of  
11      the law of the case and the Ninth Circuit's decision in  
12      *United States v. Lummi Indian Tribe*:

13              "A Court is generally precluded from  
14              reconsidering an issue previously decided by the  
15              same court, or a higher court in the identical  
16              case."

17              And here the Court issued two orders on summary  
18      judgment concerning PeopleSoft and Database infringement in  
19      construing licenses with respect to JD Edwards and Siebel.

20              The Court then gave instructions to the jury,  
21      and the jury heard the evidence and ruled in favor of  
22      Oracle on all 93 of Oracle's copyright claims.

23              The copyright claims were adjudicated to  
24      finality in this court. There was nothing left. There was  
25      nothing unresolved. Oracle prevailed entirely on its 93

1 copyright claims.

2 And the Ninth Circuit's verdict on appeal was to  
3 affirm the copyright verdict. They did not reverse any  
4 part of it. They did not criticize you. They did not  
5 criticize any of the jury's findings. They didn't say  
6 anything about the copyright verdict was unclear. They  
7 simply, flat out affirmed.

8 In that situation, under the rule of mandate and  
9 the law of the case, you should not go back and revisit  
10 your prior orders or the jury's determinations. Those are  
11 still binding. Those determinations are still valid.  
12 There's no basis to narrow the scope of Rimini's copyright  
13 infringement liability. Instead, you should issue a  
14 permanent injunction that enjoins the full scope of  
15 Rimini's infringing conduct that both you and the jury have  
16 already adjudicated.

17 There's a particularly powerful reason why you  
18 should do this and why your injunction should reach matters  
19 that were not reached by the Ninth Circuit in their opinion  
20 on the merits. And one of them is that Rimini made  
21 strategic decisions on appeal and some unstrategic  
22 decisions about issues that it wanted to challenge.

23 Rimini didn't appeal everything that you found  
24 on summary judgment, and they didn't appeal everything the  
25 jury found.

1           To take a couple of examples, the jury found  
2           liability for the creation and distribution of derivative  
3           works.

4           You may recall at the 2015 trial Oracle put on  
5           Professor Randall Davis who testified how Rimini created  
6           derivative works in the form of patches and updates and  
7           fixes and then distributed them to hundreds of its  
8           customers, and he had charts and graphs showing the process  
9           by which Rimini created these derivative works and the  
10          number of different customers that received them.

11          And the next witness at trial was Seth Ravin,  
12          Rimini's CEO. And he was confronted with these exhibits  
13          from Professor Davis' testimony, and he agreed, he said  
14          that sounded right to him.

15          And when asked by his own counsel about the  
16          preparation of these derivative works and their  
17          distribution to customers, he said that Rimini did it,  
18          quote, all the time. So the jury found -- had that  
19          evidence in front of them, and they ruled in favor of  
20          Oracle on the merits.

21          On appeal, Rimini elected not to challenge the  
22          findings about derivative works and distribution.

23          Now, I understand that there may have been a  
24          reason why Rimini didn't want to do that and why they  
25          limited their appeal to the reproduction rights. If the

1 copies of the software, the development environment sitting  
2 on Rimini's servers were infringing, then obviously the  
3 derivative works that were prepared with them and were  
4 distributed from them were also infringing. So there was  
5 no upside to Rimini from separately challenging the  
6 derivative works and distributor issues on appeal. They  
7 didn't touch those issues on appeal.

8 But a necessary consequence of that is that the  
9 Ninth Circuit, therefore, didn't reach it. When an  
10 appellant who has lost in the court below doesn't raise an  
11 issue on appeal, there's no reason for the court of appeal  
12 to do that, unless it were jurisdictional, which here it  
13 wasn't.

14 And yet now what do we see when Oracle has  
15 renewed its motion for a preliminary injunction? Rimini is  
16 telling you that you shouldn't enjoin the preparation of  
17 derivative works or the distribution of them because,  
18 quote, the Ninth Circuit didn't reach the issue. But they  
19 didn't reach the issue because Rimini didn't raise it.

20 The situation is even more extreme with respect  
21 to Oracle Database. Oracle moved for summary judgment on  
22 every single copy of Oracle Database that Rimini had in its  
23 possession or that it used to provide for support.

24 We said that none of them were authorized by the  
25 developer license, which doesn't allow the commercialized

1 use of Database, and that Rimini had no ability to assert  
2 its own customers licenses. And you ruled in favor of  
3 Oracle on all of the copies of Oracle Database.

4 And the Ninth Circuit said that Rimini waived  
5 its appeal. They said that Rimini failed to challenge your  
6 order on summary judgment, and they waived it. The Ninth  
7 Circuit used the word "waived."

8 And now look what Rimini's doing. They're  
9 coming back before you in their opposition and brief, and  
10 they're saying you can't enjoin them with respect to Oracle  
11 Database because the Ninth Circuit didn't reach the merits  
12 of the issue.

13 But that's crazy. It wasn't -- the Ninth  
14 Circuit said that Rimini had waived the demerits of the  
15 issue.

16 Take a defendant who is convicted of murder and  
17 then files his notice of appeal several days late. I bet  
18 the court of appeals is going to find that he probably  
19 waived his right to appeal. That doesn't mean he's not a  
20 murderer anymore. It means he has waived his ability to  
21 challenge that determination. Yet, that is literally the  
22 argument that Rimini is saying.

23 They lost on summary judgment with respect to  
24 Database. The Ninth Circuit said they had waived their  
25 ability to challenge that on appeal. And before you they

1 say, aha, we're in the clear, you can't enjoin us.

2 No, that's not right. They're not in the clear.  
3 They're absolutely not in the clear when they have waived  
4 their right to appeal and they have lost across the board  
5 before this court on Oracle Database. So you should  
6 absolutely enjoin them with respect to Oracle Database  
7 because they waived that on appeal.

8 And there were other issues that Rimini chose  
9 strategically or unstrategically not to raise on appeal.  
10 The Ninth Circuit reminded us all of one of them in  
11 footnote 2 where they pointed out that your jury  
12 instructions very clearly distinguished between software  
13 and documentation. And the Ninth Circuit noticed that  
14 there was no appeal by Rimini with respect to any of the  
15 documentation.

16 Does that mean you shouldn't enjoin them with  
17 respect to documentation? No. They lost in the court  
18 below, and they chose not to raise that issue on appeal.

19 For some issues, where Rimini did appeal, there  
20 were multiple grounds on which this Court found Rimini's  
21 conduct to be infringing and the Ninth Circuit didn't need  
22 to reach all of them. For example, let's talk about the  
23 PeopleSoft environments, because Rimini makes such a big  
24 deal about this in their opposition brief.

25 On summary judgment, in February 2014, you found

1 that the PeopleSoft environments were infringing for two  
2 reasons.

3 First, you found that the license had a  
4 facilities restriction, and so because these environments  
5 were not on the customers' facilities, they infringed for  
6 that reason.

7 Second, you found that the licenses had a  
8 restriction that the software could only be used for the  
9 internal data processing operations of each particular  
10 client. By contrast Rimini cross-used. They cross-used a  
11 clone, one environment for other clients, they cross-used  
12 to have one environment to create derivative works that  
13 they would send to a large number of them. So there were  
14 two grounds for that.

15 Then at trial Oracle introduced a third ground,  
16 the derivative works issue that Rimini created and  
17 prepared, patches, fixes, updates from these environments  
18 and then distributed them.

19 On appeal Rimini challenged the facilities  
20 restriction and the cross-use restriction, but not the  
21 derivative works and distribution.

22 And the Ninth Circuit resolved the PeopleSoft  
23 environments on the facilities restriction. They said  
24 it -- yep, it sure looks like these software environments  
25 can only be at the customers' facilities, and they weren't.

1 They were on Rimini's facilities.

2 And the Ninth Circuit then dropped a footnote  
3 and said because that issue was dispositive, because that  
4 meant that all of those environments were infringing, they  
5 didn't need to reach the separate issue of cross-use.

6 That doesn't mean that they reversed you. It  
7 means that the court of appeals -- there were two grounds  
8 on which you held those environments to be unlawful, and  
9 they only needed one to affirm.

10 That's a common thing for a court of appeals to  
11 do. There might be several things in support of a district  
12 court's decision. They don't need to decide all of them.

13 Fundamentally, the way Rimini reads the Ninth  
14 Circuit's decision is that for every decision that you  
15 made, for every finding that the jury made, Rimini is  
16 saying that if the Ninth Circuit didn't reach that  
17 particular issue, they secretly reversed.

18 Rimini would have you believe that large  
19 portions of the Ninth Circuit's opinion are written in  
20 invisible ink that only Rimini can see, that they  
21 constantly went around reversing every single part of your  
22 and the jury's copyright infringement determinations that  
23 they did not explicitly reach.

24 But they didn't. That's not there. There isn't  
25 the invisible ink there with the secret reversals. The

1 verdict from the Ninth Circuit was affirmed, affirmed  
2 without qualification.

3 Rimini's argument that they narrowed the finding  
4 of copyright infringement liability, that they somehow  
5 reversed or limited, none of that is what the word  
6 "affirmed" means.

7 Under both the rule of mandate and the law of  
8 the case, your prior findings, the jury's prior findings on  
9 the full scope of Rimini's copyright infringement remain  
10 intact and should not be reconsidered, and you should issue  
11 a permanent injunction that goes to the full scope of the  
12 adjudicated liability that Rimini has for copyright  
13 infringement.

14 I'd like to turn now to the eBay factors and  
15 focus on the first two, which is irreparable injury and the  
16 remedies of law being inadequate.

17 There were several types of irreparable injury  
18 that you found in your 2016 order. There was good reason  
19 to find them, and they continue to be correct findings  
20 today.

21 The first was direct competition and the loss of  
22 market share. And we cited for the Court and cited again,  
23 and you quoted cases such as the Federal Circuit's decision  
24 in *Presidio Components* where they said:

25 "Direct competition in the same market is

1           certainly one factor suggesting strongly the  
2           potential for irreparable harm."

3           And then in another case, *Douglas Dynamics*, this  
4           was in the patent context, they said:

5           "Where two companies are in competition  
6           against one another, the patentee suffers the  
7           harm, often irreparable, of being forced to  
8           compete against products that incorporate and  
9           infringe its own patented inventions."

10          And, Your Honor, that is what is happening here.

11          Oracle has invested literally billions of  
12          dollars in its valuable software products, and Oracle uses  
13          those to compete in the market, and it finds itself in the  
14          untenable situation where Rimini takes those inventions,  
15          products that Oracle developed, and uses them to compete  
16          against Oracle.

17          Rimini didn't have to incur any of the  
18          development costs to make its own software because it  
19          doesn't have a computing software product. It uses the  
20          environments of the Oracle software environments to develop  
21          infringing derivative works, the patches that fixes them,  
22          the updates to provide to its customers.

23          Rimini can do that at 50 percent off because it  
24          doesn't spend billions of dollars to create its own  
25          software. It uses Oracle software against Oracle in an

1     infringing manner. This is the direct competition that you  
2     recognized as being an irreparable harm.

3             And Mr. Ravin was open about this on the witness  
4     stand. He said absolutely it was Rimini's business plan to  
5     avoid incurring the costs of developing a competing product  
6     and, instead, to make use of Oracle's products so they  
7     could develop patches and fixes on that to have a scaleable  
8     model, a more efficient model. He didn't use the word  
9     "infringing," but that's what that meant, to take Oracle's  
10    products in direct competition and use infringement so they  
11    could sell it at a cut-rate cost against Oracle.

12            And, as noted, you previously found this to be  
13    irreparable harm.

14            Importantly, this is copyright harm. It's not  
15    computer access harm. It is copyright harm directly  
16    relevant to the remand in your consideration of an  
17    injunction under Section 502.

18            The unlawful downloading that Oracle sued about  
19    in *Rimini I* involved tools that Rimini employee, Douglas  
20    Barren, developed for Rimini Street to use. Rimini stopped  
21    using those tools in January of 2009, but the infringement  
22    continued.

23            All the new customers they gained in 2009 in  
24    2010, in 2011, and all the years since then, that's  
25    copyright harm that is being done to Oracle with direct

1 competition.

2 And the Court found in 2016 that Rimini would  
3 not have achieved the market share that it had without this  
4 use of infringement. That's a direct link between the  
5 copyright infringement and the irreparable harm, the loss  
6 of market share and direct competition to Oracle.

7 And now why is this harm irreparable? Why are  
8 remedies at law inadequate? You said it yourself in 2016.  
9 Because loss of market share is difficult to quantify.  
10 Because every day Oracle is going out there competing in  
11 the situation of competing against its own inventions being  
12 used against itself by an infringer.

13 There's also a second type of irreparable harm  
14 that the Court found, and that's harm to goodwill and to  
15 business reputation.

16 Courts in the Ninth Circuit have repeatedly held  
17 that this type of harm is sufficient to justify a permanent  
18 injunction.

19 We've cited for Your Honor the Ninth Circuit's  
20 decisions in *Apple v. Psystar* and *Rent-A-Center* on this  
21 point. And, again, the evidence shows that Rimini's  
22 infringement did injure and continues to injure Oracle's  
23 reputation and goodwill.

24 Oracle's CEO, Safra Catz, testified that the  
25 harms to Oracle's relationships that come from Rimini

1 telling everybody that Oracle is ripping them off. Because  
2 that's what Rimini is doing, when they go out there with  
3 their 50 percent off, because they didn't have to spend any  
4 money to write any of their software, they convey the  
5 impression that Oracle is overcharging.

6 And they're proud of that. This is their  
7 marketing message. They go out and tell everybody that  
8 Oracle is overcharging them. And this breaks the bonds  
9 between Oracle and its customers. This is a harm to  
10 Oracle's reputation and goodwill.

11 There are other harms beyond that, that Ms. Catz  
12 and Edward Screven testified to at trial, that many  
13 customers believe Rimini's promises about its support being  
14 adequate, and they find out only too late that without  
15 Oracle's upgrades their systems are frozen and out of date,  
16 and they can blame Oracle for that because Oracle was the  
17 developer of the software.

18 This type of harm to goodwill is also  
19 irreparable. It's very difficult to quantify, and it's  
20 hard to compensate exactly the effects on Oracle from all  
21 of this. And the eBay and Apple cases endorse this view  
22 and say because this harm to goodwill and business  
23 reputation's difficult to quantify, it again is a further  
24 reason for a permanent injunction.

25 Now, Rimini constantly argues that the jury's

1 rejection of lost profits as a measure of damages means  
2 there was no harm to Oracle. But that's incorrect.

3 The jury was given different measure of ways to  
4 measure damages and was asked to choose the one they  
5 thought was most appropriate. They chose a fair market  
6 value and went with that one.

7 As the Court previously acknowledged, they may  
8 have chosen not to award lost profits simply due to the  
9 difficulty in ability to compute the lost profits. And the  
10 case law has recognized that sometimes lost profits can be  
11 difficult to compute, and that's a further reason why an  
12 injunction is important to protect the harm to goodwill and  
13 the harm to business competition.

14 This is also why the *Rimini II* lawsuit is no  
15 answer to Oracle's products. Rimini says in their  
16 opposition brief that you don't need to issue a permanent  
17 injunction because there's a second lawsuit between the  
18 parties, and they say any problems can be dealt with in  
19 damages in that case. They say Oracle hasn't explained why  
20 it needs a permanent injunction in the first case when we  
21 have the second one going on.

22 But we have explained, and there are several  
23 reasons, and harm to goodwill and business reputation is  
24 one of them. Those are extremely difficult to quantify and  
25 to recover in any lawsuit. These harms are ongoing.

1           Rimini's advertising campaign, where they say  
2           they're 50 percent off, means that Oracle is overcharging,  
3           that reaches not just customers that end up going to  
4           Rimini, it reaches a large segment of Oracle's customer  
5           base, including customers that end up not going to Rimini,  
6           including customers when they're trying to make the initial  
7           decision do they license Oracle's software or do they  
8           license a competitors's software, such as SAP or Salesforce  
9           or Workday.

10           Rimini's broad message that Oracle is ripping  
11           off its customers, which Rimini delivers because through  
12           infringement it can offer 50 percent off, this hits  
13           Oracle's customer base as a whole and customer -- potential  
14           customers.

15           Even if Oracle recovers every single dollar in  
16           lost profits in the *Rimini II* action, it will never have  
17           any recovery for that harm to its business reputation and  
18           goodwill due to Rimini's broad message out to Oracle's  
19           customer base and potential customer base. And that's one  
20           reason why an injunction is necessary and the second  
21           lawsuit will not provide a full recovery for Oracle.

22           There's also another type of irreparable harm  
23           for which there's no remedy at law, and that's Oracle's  
24           right to exclude. And this was something I discussed in  
25           2016 about the *eBay* case where Chief Justice Roberts had a

1       concurring opinion, where he acknowledged that, yes, it's  
2       true, courts apply the traditional four factors in equity  
3       to decide whether to issue an injunction.

4               And, yet, in case after case patent holders  
5       routinely win the injunctions. And he was trying to  
6       explain why is that? Is there some kind of contradiction  
7       in there?

8               And he said, no, there's no contradiction  
9       because at bottom a patent is a right to exclude, and  
10      fundamentally damages can never fully make up for an  
11      infringement on the right to exclude.

12              A copyright is similar to a patent in that it is  
13      also a right to exclude. And here, without an injunction,  
14      Oracle suffers irreparable harm.

15              In this case, Oracle has been forced against its  
16      will to become an involuntary licensor of its software to  
17      Rimini Street, a company with which it wanted never to do  
18      any business. The jury awarded a fair market value of use  
19      to Oracle as a measure of damages approximating the value  
20      to use of Rimini Street, effectively, you know, a  
21      hypothetical license amount.

22              But Oracle didn't want to license its software  
23      to Rimini at any amount of money. What Oracle wants is to  
24      enforce its right to exclude. And that's why we're here  
25      before you today, saying just paying Oracle what amounts to

1 rent for using its property, a fair market value for using  
2 it for a period of time isn't sufficient, because Oracle  
3 has a right to exclude, to keep Rimini away from its  
4 copyrights.

5 Sometimes I think that when we're talking about  
6 intellectual property, analogies to physical property can  
7 be helpful to illustrate a principle. And this is one of  
8 those times.

9 Imagine that you're a property owner. You spent  
10 a lot of money to buy some land, and you want to use this  
11 land to run your business. So you put up a shop on your  
12 land. You have a business, you're working hard, you're  
13 getting customers, you're making a profit, and then one day  
14 you notice that your competitor has built their shop on  
15 your land as well.

16 They didn't go out, they didn't buy their own  
17 land, they put up their shop on your land, and they're out  
18 competing with you.

19 So you sue them for trespass, as any reasonable  
20 person would. You win at trial, and the jury awards you  
21 damages, say reasonable value of use, amounting basically  
22 to rent for them being on your land.

23 Then you move for a permanent injunction, and  
24 the competitor comes back and says, Oh, you don't need an  
25 injunction, you can just sue us again in the second case,

1 and then down the road you might get some more dollars for  
2 a continued use of your land without your permission.

3 Your Honor, in that situation I hope you would  
4 have some sympathy for the property owner who said, Hey,  
5 wait a second, I never wanted to be a landlord. I didn't  
6 want to rent out my property, especially to my biggest  
7 competitor. This is -- I didn't want to be in that  
8 business, I don't want to have anything to do with them at  
9 all.

10 That's the position in which Oracle finds itself  
11 as well. It never wanted to be licensing its software to  
12 Rimini, it wants Rimini not to use that at all.

13 The only way to enforce Oracle's right to  
14 exclude is with a permanent injunction. And that's another  
15 reason why the *Rimini II* case cannot be a remedy at law for  
16 Oracle because that would just -- that could be more  
17 damages, yes, Oracle could potentially recover a very large  
18 amount of damages, and is, in fact, seeking a large amount  
19 of damages, but fundamentally Rimini's conduct would still  
20 be continuing.

21 And the only way to enforce Oracle's right to  
22 exclude is with an injunction. Otherwise Rimini will  
23 continue trespassing on Oracle's intellectual property.

24 The remaining eBay factors are straightforward.  
25 The balance of hardships and the public policy again tilt

1 in Oracle's favor as you determined in 2016.

2 On both of those issues, it's important to note  
3 that Oracle drafted a proposed order that tracks exactly  
4 the liability determinations that you made on summary  
5 judgment and the jury instructions that you gave to the  
6 jury going into the trial. We mirrored that exactly to  
7 make sure that this injunction tracks the full scope of the  
8 liability findings and doesn't go any further.

9 You may recall that the prior injunction had two  
10 parts. The first part was about copyright under Section  
11 502 of the Copyright Act, and the second part was under the  
12 California computer access statute. They were completely  
13 distinct parts of the injunction. We didn't mix and  
14 mingle. We didn't match up copyright and the California  
15 access. We had them as separate.

16 And the Ninth Circuit saw that and they noticed  
17 it and they pointed that out. They said, yes, it looks  
18 like that computer access injunction was totally distinct  
19 from the copyright injunction.

20 So what we did, Your Honor, when we filed this  
21 renewed motion, is we just took out all of the computer  
22 data access and fraud and just went with the  
23 straightforward copyright injunction. It tracks the  
24 findings that you made before exactly, it tracks your  
25 liability findings and the jury instructions.

1           And because of that, the balance of hardships  
2           and public policy weigh strongly in favor of Oracle because  
3           you would only be enjoining conduct that has already been  
4           adjudicated to having been found unlawful and there's no  
5           legitimate reason for that conduct to continue.

6           Now, Rimini has a bunch of other arguments that  
7           they made again in 2016 and that you rejected. But for the  
8           sake of completeness I'll tic through them.

9           One is their voluntary cessation argument. They  
10          say that after you ruled against them on their February  
11          2014 summary judgment order they began to change their  
12          ways.

13          Now, as you know, Your Honor, we don't believe  
14          for a minute that they stopped infringing, and that's part  
15          of the reason why we have the second case.

16          But for purposes of today, we're not asking you  
17          to decide *Rimini II*, we're asking you to look at cases like  
18          *MGM v. Grokster*, as you did before, that say that, Wait, if  
19          you only cease the infringing conduct after a court has  
20          issued a summary judgment order against you, that doesn't  
21          count.

22          That's not good enough for voluntary cessation  
23          because they did it only under judicial compulsion. And  
24          so -- and presumably if there were no injunction and no  
25          further judicial compulsion, there's too great a risk that

1 the infringement could resume.

2 And we cited other cases, including the Ninth  
3 Circuit's decision in *SEC v. Koracorp* that say, again, that  
4 if they stop only after they've been caught, then that  
5 doesn't count as a valuable voluntary cessation.

6 You should also bear in mind that after you  
7 issued the last injunction in 2016, when Rimini claimed it  
8 had stopped its infringing ways, what did they do? They  
9 filed an emergency motion. They said that your injunction  
10 would cause -- I'm going to quote their words, untold  
11 irreversible consequences to Rimini Street if that  
12 injunction were allowed to go into effect.

13 They submitted a declaration under penalty of  
14 perjury saying that injunction would require additional  
15 changes to their processes.

16 Well, that injunction just tracked the scope of  
17 the infringing conduct. That meant they hadn't really  
18 ceased their infringing ways.

19 And, again, Rimini raises the innocent infringer  
20 argument that they raised in 2016 and that you dealt with  
21 in your prior order. That just has nothing to do with the  
22 Court's ability to issue an injunction. Section 502(a) of  
23 the Copyright Act authorizes you to issue a permanent  
24 injunction. Congress said absolutely nothing about  
25 requiring the infringement to be intentional or willful or

1 anything like that. An innocent infringer can be enjoined  
2 like anyone else.

3 We've cited cases for Your Honor where courts  
4 have done that. Rimini has yet to come up with a case  
5 saying that there's some kind of unstated requirement in  
6 the statute that innocent infringers can't be enjoined. And  
7 I do think as we consider that innocent infringer argument,  
8 we all need to use common sense and realize what an  
9 injunction is. An injunction enjoins conduct in the  
10 future, conduct that would happen after you issue  
11 injunction, not conduct in the past.

12 The innocent infringer determination was based  
13 on the state of mind the jury thought Rimini had with  
14 respect to the infringement before the verdict came down.

15 But then the verdict came down, and the jury  
16 found that they were liable, and the Ninth Circuit affirmed  
17 that judgment of liability.

18 So if you issue an injunction at this point,  
19 you're not enjoining innocent infringement, your enjoining  
20 infringement that cannot in any way, shape, or form be  
21 considered innocent.

22 Lastly, with respect to the scope of the  
23 injunction, all of the arguments Rimini raises now are just  
24 repeats from 2016, with one exception, and that's the  
25 exception, the argument that I began with, where they say

1       that you can't enjoin something unless the Ninth Circuit  
2       specifically reached the merits of that issue.

3               And that's just flat-out wrong. As I said,  
4       there were a number of reasons Ninth Circuit didn't reach  
5       every issue. One of the big reasons is that Rimini waived  
6       some of those arguments and didn't raise them on appeal,  
7       and others the court of appeal didn't need to.

8               But under both the rule of mandate and the law  
9       of the case, there's no call for you to go back and narrow  
10      the scope of yours and the jury liability findings. All of  
11      the eBay factors favor the grant of a permanent injunction,  
12      and we ask that the Court grant one. Thank you.

13              THE COURT: Thank you, Mr. Hixson.

14              MR. PERRY: May I approach, Your Honor?

15              THE COURT: You may.

16              MR. PERRY: Mark Perry for Rimini Street, Your  
17      Honor. I've handed up to the bench and to opposing counsel  
18      a booklet with some slides that I hope will illustrate the  
19      core of the parties' dispute. And that's really what I'd  
20      like to focus on today.

21              Oracle stands here and asks this Court to enter  
22      the identical injunction that one panel of the Ninth  
23      Circuit has already stayed and another panel of the Ninth  
24      Circuit vacated.

25              Oracle admits that it advances the same

1 arguments that it did in 2016 because in Oracle's view  
2 there has been no change in law, no change in facts, and  
3 accordingly the merits of its motion have not changed. And  
4 that's a direct quote from its motion at page 12.

5 What's changed, Your Honor, is we have a Ninth  
6 Circuit opinion. We had an appeal in which these issues  
7 were hotly contested by the parties, and we didn't have  
8 that the last time around. And our summation,  
9 respectfully, is that the entry of Oracle's proposed  
10 injunction is foreclosed by the Ninth Circuit's opinion.  
11 And I'd like to focus at least the first part of my remarks  
12 on that.

13 The parties' dispute really boils down to what  
14 is the effect of that decision. You just heard Mr. Hixson  
15 describe in his second preliminary statement that  
16 everything this Court and the jury did stands and was  
17 affirmed by the Ninth Circuit. That's Oracle's position.

18 Rimini's position is what the Ninth Circuit,  
19 when confronted with express arguments, where it ruled on  
20 one and not the other, the second is not preclusive, it  
21 doesn't bind this Court, doesn't bind the parties.

22 And Oracle called that -- Mr. Hixson just called  
23 that the most curious aspect of our argument. He said that  
24 has no authority and no basis. And I think this really is  
25 the Court -- this Court will have to decide this two

1 competing positions.

2 Because if Oracle's right, they're further down  
3 the road; but if we're right, they lose entirely. You  
4 can't issue the injunction if they're not right on this  
5 point.

6 And let me explain to the Court why they're not  
7 right. And I'd like to use the PeopleSoft licenses as an  
8 example.

9 As the Court will recall, there were two bases  
10 for PeopleSoft liability: local hosting and cross-use.  
11 Both were appealed to the Ninth Circuit. There's no waiver  
12 issue here. Both were hotly disputed in the Ninth Circuit.  
13 And I'll come back to that point.

14 But in the Ninth Circuit's decision, the Ninth  
15 Circuit ruled only on local hosting. The Court sustained  
16 the liability finding as to PeopleSoft as to local hosting,  
17 and it put in a footnote, footnote 6, and I've put it up on  
18 slide 3 here because it's very important:

19 "Because we address the question of  
20 infringement as to PeopleSoft on the narrow  
21 ground of local hosting, we do not decide  
22 whether direct use or cross-use was permitted by  
23 the PeopleSoft license."

24 "We do not decide."

25 So what is the consequence of that, Your Honor?

1 In its reply brief, Your Honor, Oracle says, and you heard  
2 Mr. Hixson say it again today, that the law of the case and  
3 the law of the -- and the mandate rule apply here.

4 That's wrong. That's wrong as a matter of law.  
5 And since we didn't get a surreply, I need to explain why  
6 the first time. Frankly, this is federal courts 101.

7 Your Honor, when a judgment goes up on appeal,  
8 it's the judgment of the highest court that's controlling,  
9 not the summary judgment, not the verdict, not the post-  
10 trial judgments in the trial court, but the appellate  
11 judgment.

12 And the scope of the appellate judgment and  
13 mandate are defined by the Court's opinion if it chooses to  
14 write one. This is the Black Letter Law.

15 I've put on Restatement of Judgments, what  
16 happens if two grounds for a judgment are presented to the  
17 court of appeals and the court resolves one but refuses to  
18 decide the other?

19 And the restatement is very clear.

20 "If the appellate court upholds one of the  
21 determinations as sufficient and refuses to  
22 consider whether or not the other is sufficient  
23 and accordingly affirms the judgment, the  
24 judgment is conclusive as to the first  
25 determination," the one decided by the court of

1           appeals, it is not conclusive as to the second  
2           determination. That is the law.

3           The federal appellate courts uniformly follow  
4           this approach.

5           I've put up on the next slide a quote from a  
6           representative Ninth Circuit case:

7           "It is a well-established principle of  
8           federal law that if an appellate court considers  
9           only one of a lower court's alternative bases  
10          for its holding, affirming the judgment without  
11          reaching the alternative bases, only the basis  
12          that is actually considered can have any  
13          preclusive effect in subsequent litigation."

14          And I put the citation on here. And because  
15          this issue came up for the first time in Oracle's reply  
16          brief, I've put, Your Honor, in the packet at slide -- or  
17          in tab 5, just a few respective case citations from lots of  
18          courts of appeals for this same proposition, which I think  
19          is undisputed and frankly indisputable.

20          Your Honor, the Ninth Circuit considered local  
21          hosting sufficient to sustain the liability as to  
22          PeopleSoft. The Ninth Circuit did not decide cross-use.  
23          Therefore, the parties and the Court are bound as to local  
24          hosting but are not bound as to cross-use.

25          That means it can be litigated again in *Rimini*

1     II, and will be, and cannot be the subject for an  
2     injunction now after the Ninth Circuit's ruling. The  
3     equitable power of this Court is limited to the acts  
4     actually adjudicated as infringing.

5             Oracle admits this, Your Honor, in their motion  
6     at page 17.

7             "Oracle seeks only to enjoin acts that have  
8     already been determined to be unlawful."

9             And as to PeopleSoft the only act determined to  
10    be unlawful by the Ninth Circuit was local hosting, and the  
11    Court expressly did not decide whether cross-use  
12    was unlawful.

13            The same point carries through, Your Honor, to  
14    JD Edwards and Siebel, the other two product lines that  
15    have this issue.

16            Here we have something of the converse of the  
17    PeopleSoft situation. The court -- the Ninth Circuit ruled  
18    that there are no site restrictions in those two licenses.  
19    There's no local hosting problems at all, even though  
20    Oracle's proposed injunction contains a local hosting  
21    restriction that has no basis in the license, the judgment,  
22    or the appellate mandate.

23            And with respect to cross-use, the Ninth Circuit  
24    was very circumscribed. The Ninth Circuit ruled that a  
25    very specific form of cross-use, the use of one client's

1 software to create a development environment for a future  
2 customer was an infringing act.

3 Court of Appeals stressed, and we put this quote  
4 up on the next slide:

5 "Rimini created development environments for  
6 future customers using the license of an  
7 existing customer on the basis that future  
8 customers presumably would have licenses that  
9 would permit them to hire Rimini to create  
10 development environments."

11 That was the context of the Ninth Circuit's  
12 discussion of cross-use for JD Edwards and Siebel.

13 Now, in its reply brief, Your Honor, at page 3,  
14 Oracle says that we, Rimini, ignore that the Ninth Circuit  
15 broadly defined cross-use to include both current customers  
16 and future customers.

17 Your Honor, it's absolutely true at page 956 of  
18 the Court's -- Ninth Circuit's opinion in the background  
19 section the Court has a sentence that's prefaced, generally  
20 speaking, where it describes what cross-use may be broadly.  
21 But then in the analysis portion of its discussion, on page  
22 957 of the opinion, where it actually applies cross-use  
23 limitations to the JD Edwards and Siebel products, it is  
24 limited to future customer cross-use.

25 And the Ninth Circuit itself removed any doubt

1 on this, Your Honor, in the very next portion of its  
2 opinion, which addressed copyright misuse, and the Court  
3 said, and I'm quoting from page 958, and this is at the  
4 bottom of slide 8 -- 6, excuse me, quote:

5 "The only remaining question is whether it  
6 would be copyright misuse to forbid Rimini from  
7 creating environments for licensees before they  
8 have become customers."

9 Future customer cross-use. And the Court said  
10 that is not copyright misuse. The Court did not address at  
11 all whether current customer cross-use would be copyright  
12 misuse because it didn't decide anything as to current  
13 customer cross-use.

14 The only scope of the Ninth Circuit's opinion  
15 was as to future customers.

16 And if we could put up slide 7, there's a reason  
17 for this, Your Honor. A really good reason.

18 The Ninth Circuit had some real skepticism about  
19 whether cross-use is infringing or unlawful at all. Rimini  
20 came up to the Ninth Circuit and said cross-use is  
21 not copyright infringement. And it's not, Your Honor.  
22 Copyright Act deals with copying. Use is dealt with by  
23 licenses. This is not an infringement problem, but a  
24 license problem.

25 And the Ninth Circuit recognized this. And in

1 the questioning of Oracle's counsel, Judge Graber -- and  
2 there's a long quote up there on the screen and in the  
3 booklet, and the gist of it is if Rimini had the right to  
4 make 10 copies for 10 clients and instead they made 10  
5 copies for one client and then distributed it 10 times, why  
6 does that make any difference?

7 And Oracle's response, Your Honor -- and this is  
8 in the transcript, which we've also put in the booklet and  
9 we urge the Court to read, of the Ninth Circuit's argument,  
10 because Oracle made a number of concessions, that it would  
11 violate the terms of the license. Not that it was  
12 copyright infringement. Because it's not copyright  
13 infringement.

14 If the license says you can only copy the  
15 software while you're wearing a green shirt and you copy  
16 the software wearing a red shirt, you have not committed  
17 copyright infringement. You may have breached the license,  
18 but you have not committed copyright infringement. And  
19 that's a core dispute.

20 We argued on appeal, Your Honor, that -- and  
21 there's a distinction, by the way, that's in the law  
22 between copyright license covenants and conditions. And  
23 there's a lot of cases on this. And we argued on appeal  
24 that the whole cross-use kerfuffle is really properly put  
25 under the context of conditions. It is a subject of the

1 license and is only dealt with by breach of contract law  
2 and not by copyright law.

3 Oracle urged the Ninth Circuit not to reach that  
4 issue. It said it hadn't been adequately developed.

5 And the Ninth Circuit agreed with Oracle and  
6 said we're not going to decide that question whether  
7 cross-use is contractual rather than a copyright issue  
8 because it's not properly before us. If it's not properly  
9 before them, then it is definitely before this Court in  
10 *Rimini II*.

11 The parties will vigorously debate this. The  
12 experts will deal with this. The briefing will deal with  
13 this. This is a critical issue in the second case, Your  
14 Honor, whether Oracle has any basis to restrict the use to  
15 which the copies are made because, as I will describe in a  
16 moment, the Ninth Circuit also resoundingly sustained  
17 Rimini's right to make the copies.

18 Oracle says in its reply brief at page 3 that  
19 any act of cross-use is copyright infringement. That is  
20 false. That is not true. And it is certainly not  
21 supported by the Ninth Circuit's opinion. They tried to  
22 sell that in the Ninth Circuit, and the Ninth Circuit  
23 wasn't buying it.

24 In fact, Your Honor, at the Ninth Circuit an  
25 extraordinary thing happened. If we can skip forward to

1 slide 9. Oracle's lawyer in the Ninth Circuit conceded  
2 that Rimini can make copies to support a licensed user.

3 Now, that may seem obvious. It's been our  
4 position all along. But Oracle has never admitted that  
5 until the Ninth Circuit oral argument. It was the first  
6 time in the long history of this litigation that Oracle has  
7 conceded that Rimini can use the software because the  
8 licenses after all, say that the licensee, the customer,  
9 can hire a third-party vendor to perform support.

10 And what the Ninth Circuit recognized is several  
11 things. First, and this is all from the Court's opinion at  
12 page 951:

13 "At all relevant times Rimini provided  
14 third-party support for Oracle's enterprise  
15 software in lawful competition with Oracle's  
16 direct maintenance services."

17 So the provision of support itself is lawful.  
18 We know that from the Ninth Circuit.

19 Second, the Ninth Circuit told us, again at page  
20 952:

21 "Creating these software updates inherently  
22 requires copying of Oracle's copyrighted  
23 software which, unless allowed by license, would  
24 be copyright infringement.

25 We're all in agreement on that too.

1           But the important part for now is copying is  
2 required to perform the support system.

3           And then at page 958 the Ninth Circuit expressly  
4 ruled that the licenses:

5           "Would not preclude Rimini from creating  
6 development environments for a licensee for  
7 various purposes after that licensee has become  
8 a customer of Rimini."

9           In other words, carving out future customer  
10 cross-use, the only subject it actually dealt with, the  
11 Ninth Circuit expressly said that the licenses permit  
12 Rimini from copying the software to create development  
13 environments to provide support to Rimini's customers who  
14 are also Oracle licensees.

15           That's what the Ninth Circuit said in this case,  
16 Your Honor. That is very different than the posture in  
17 which Oracle came to this Court in 2016.

18           Two years ago, Mr. Hixson stood at this lectern  
19 and told this Court, quote, and this is in the transcript  
20 of page 70 from last time:

21           "Oracle wants to stop Rimini from using its  
22 software."

23           That's what the injunction they have proposed is  
24 designed to do.

25           They don't get to stop Rimini from using the

1 software. The licenses allow the customers to use the  
2 software, including for third-party support, and that was  
3 sustained by the Ninth Circuit. The only question is  
4 whether there are particular acts that need further  
5 judicial adjustment, and we submit no.

6 Because this whole case, Your Honor, is a  
7 license dispute. This whole case is about the scope of  
8 these licenses and whether or not after making the copies,  
9 which are permitted by the licenses, the manner in which  
10 Rimini uses them is within or without the various  
11 conditions imposed by the licenses.

12 And Oracle at the Ninth Circuit, and this is the  
13 second quote on slide 9, he said this, and I'm quoting:

14 "To the extent there are disputes about  
15 that, I mean, Gibson Dunn is involved in *Rimini*  
16 *II* at a stage they weren't involved in *Rimini I*,  
17 and those issues can be resolved in *Rimini II*.

18 That's what Oracle told the Ninth Circuit, to  
19 avoid deciding whether cross-use is copyright infringement  
20 at all, to avoid deciding whether current customer  
21 cross-use is even in violation of the contracts, Oracle's  
22 lawyer, Paul Clement, stood up in the Ninth Circuit and  
23 said those can be decided in the second case.

24 And now Mr. Hixson comes to this Court and says,  
25 Don't wait for the second case, decide them now.

1           There's a fundamental inconsistency in those  
2 positions, Your Honor, and we submit that given the  
3 representation that Oracle made to the Ninth Circuit was  
4 clearly relied on by the Ninth Circuit, which then issued a  
5 very narrow ruling not reaching cross-use, this Court  
6 simply does not have the power to enjoin cross-use because  
7 it hasn't been resolved.

8           If we can go to slide 10 please. There are four  
9 products at issue. And I put up here just a simple chart,  
10 four-column chart, Your Honor.

11           The court of appeals had one basis for ruling on  
12 each one of them.

13           Local hosting for PeopleSoft; future customer  
14 cross-use for JD Edwards; future customer cross-use for  
15 Siebel; and waiver for Database.

16           Let me pause on Database.

17           The holding was not, as Mr. Hixson said this  
18 afternoon, that Rimini had waived its challenge to Database  
19 licenses. It is rather, as the Court undoubtedly will  
20 recall, there are two sets of Database licenses: the  
21 developer licenses and the customer licenses called OLSA's.

22           This Court ruled that the Rimini services were  
23 not permitted under the developer license and that Rimini  
24 could not invoke the customer licenses because none of the  
25 development environments had actually been obtained at the

1 summary judgment stage from customers.

2 We didn't challenge that ruling on appeal, and  
3 in that sense it is waived. No court, this Court or the  
4 Ninth Circuit, has ever decided whether a development  
5 environment obtained through a customer license can be used  
6 for this purpose. And again that's a question for *Rimini*  
7 *II*. It simply was never presented.

8 *Rimini I* dealt with a developer license. We  
9 have -- we'll live with that. I mean, we agree, of course,  
10 the Ninth Circuit decides certain things. That's fine.  
11 But the Ninth Circuit didn't decide anything about the  
12 customer licenses for the simple reason that this Court had  
13 not either.

14 The preclusive effect to the Ninth Circuit's  
15 ruling though, Your Honor, extends no further than these  
16 four points. That means the other issues remain open for  
17 litigation in *Rimini II*. And it means those issues cannot  
18 be enjoined in *Rimini I*.

19 And it bears remembering in this context, Your  
20 Honor, that *Rimini* was willing, ready, able to have  
21 everything decided in one lawsuit. We asked the Court to  
22 put all the issues together and decide them at once, and  
23 Oracle refused. Oracle said, "No, let's keep the two cases  
24 apart, let's have the past practices in case *I* and the  
25 current practices in case *II*, and this case agreed with

1 Oracle.

2 We're not challenging that. But the consequence  
3 of that is we have the second case, and it's going to have  
4 a lot of things that have to be resolved in it as the Court  
5 is aware.

6 This exercise, the permanent injunction, is not  
7 the place to prejudge those issues.

8 Your Honor, I'd like to put this in broader  
9 perspective. And with apologies for my artistic skills,  
10 I've drawn this graph to describe both this case and,  
11 frankly, the ordinary course of commercial litigation.

12 You know, Oracle came to this Court in *Rimini I*  
13 with a complaint that had a dozen causes of action against  
14 two defendants, Rimini Street and Mr. Ravin, that sought  
15 all kinds of relief on all kinds of theories. And over  
16 years of litigation the case was whittled down. And that's  
17 what happens to cases, right?

18 At summary judgment the Court ruled on some  
19 things. Oracle withdrew some things. The jury rejected  
20 some things and agreed with some other things. And the  
21 Ninth Circuit, as we've just spent several minutes  
22 discussing, agreed with even fewer things, so that at the  
23 end of the process or the bottom of the funnel we have a  
24 much narrower case than we started out with.

25 As we stand here today, Your Honor, we're at the

1 pointy end of the pyramid. We're at the narrowest, the  
2 apex, the smallest part of the case, and the Court's  
3 injunctive power, equitable power, to the extent it needs  
4 to be or ought to be exercised at all is limited there.

5 Mr. Hixson wants to take you back to the base,  
6 the broad base, the take-everything base. Under his view  
7 Rimini's very existence in the marketplace is an affront to  
8 Oracle, a challenge to its customers, a threat to its  
9 property, and an exercise of this Court's equitable power.  
10 He wants the Court to enjoin Rimini's existence. He wants  
11 you to stop Rimini from accessing Oracle's copyrights.

12 That ship has sailed. The Ninth Circuit said  
13 that competition is lawful, access is required, copying is  
14 required, and it's permitted by the licenses.

15 The details can be sorted out in the second  
16 case. That's what we know from the appeal.

17 And the injunction -- there's none necessary,  
18 but even if it were -- we're not even talking about the  
19 right discussion. We ought to be at that narrow very end  
20 of the pyramid.

21 And this feeds directly to the eBay factors,  
22 Your Honor. And I'm only going to talk about one, because  
23 one is absolutely dispositive here, and that's irreparable  
24 injury.

25 You know, the first time around, Oracle stood up

1 here, Mr. Hixson stood at this lectern and said you should  
2 enjoin Rimini because they have callous disregard, wilful  
3 disregard for property rights, and we know that both from  
4 the copyright verdict and from the hacking claims.

5 And this Court agreed with Oracle. And the  
6 Court wrote in its order that the improper access and  
7 downloading of data from the website caused the irreparable  
8 harm, it was a factor in the irreparable harm.

9 The Ninth Circuit, we know, reversed the hacking  
10 judgment, reversed the hacking injunction entirely, and  
11 then vacated the copyright injunction. And the Court of  
12 Appeals was very clear on why it did that.

13 The Court said, and I put up some quotes on  
14 slide 13, the district court assessed the four factors by  
15 referring to both the copyright and the hacking claims  
16 without considering separately the propriety of issuing an  
17 injunction as to the copyright claims alone.

18 And we know which factor was important to the  
19 Ninth Circuit because they told us that too.

20 For example, the Court concluded that Rimini's  
21 violations of state computer access statutes contributed to  
22 an irreparable injury to Oracle's business reputation and  
23 goodwill.

24 So we know that the Court of Appeals has told  
25 this Court we need to reevaluate irreparable injury.

1           What does Oracle say? Oracle says, and this is  
2 a direct quote from its motion at page 13, that it, quote,  
3 never argued that the hacking claim supported issuance of a  
4 copyright injunction. It never argued that.

5           Well, that's just false, Your Honor. It argued  
6 that to this Court, and this Court agreed with Oracle. It  
7 argued it to the Ninth Circuit.

8           I put up a quote on the slide just so you see:

9           "Much of Rimini's business and the harms  
10 Rimini caused Oracle, depended on the  
11 unauthorized downloading that formed the basis  
12 of the computer abuse verdicts."

13           I mean, yes, they did argue it. And the court  
14 of appeals was aware they argued it. The court reversed  
15 the hacking injunction and vacated the copyright injunction  
16 to do that.

17           Now, why did Oracle argue that? Well, again, it  
18 needed some intentional conduct. It was faced with this  
19 innocent infringement verdict. It hates that. We know  
20 that.

21           Mr. Clement in the appellate court called it the  
22 most perplexing part of this case is the jury's innocent  
23 infringement verdict. We know the jury found that Rimini  
24 had no reason to know that its actions were unlawful.  
25 Because Rimini simply read the licenses differently than

1     this Court did, Your Honor. That's the basis of this whole  
2     dispute. Rimini read the licenses differently than the  
3     Court did, and the jury said that was innocent.

4             Oracle -- we've now briefed this issue six times  
5     in two courts. Oracle can't find a case, since the  
6     republic was established, in which any court anywhere has  
7     imposed a permanent injunction on an adjudicated innocent  
8     infringer.

9             Mr. Hixson's response is, Well, Rimini can't  
10    find a case where it didn't happen.

11            Well, there's two problems with that, Your  
12    Honor. Every case it didn't happen because there's no such  
13    case, right? And it's Oracle's burden. The proponent of  
14    an injunction has to prove that it is.

15            Does this Court really want to be the first case  
16    in history to impose an injunction on an innocent  
17    infringer? We don't think so. And we don't think it's  
18    warranted.

19            And it's not just the innocence finding, Your  
20    Honor. We could even set that to the side. I think the  
21    innocence finding is telling about how the jury viewed  
22    Rimini's conduct.

23            But let's really just look at Oracle's plain-old  
24    failure of proof. To set the table, let's remember what  
25    Oracle's evidence is. They've got one snippet from Safra

1     Catz, the CEO, who says that when Rimini offers its  
2     services at 50 percent off, it breaks the bonds of trust  
3     with its customers. That's their evidence of irreparable  
4     harm.

5             Your Honor, she's referring to Oracle -- or,  
6     excuse me, to Rimini's existence, its ability to offer  
7     support services in the marketplace; again, what the Ninth  
8     Circuit has said is lawful competition in the market for  
9     support services.

10            What Ms. Catz did not say was that the specific  
11     act of local hosting the PeopleSoft development  
12     environments caused any harm to Oracle. What Ms. Catz did  
13     not say was that the specific act of future customer  
14     cross-use as to JD Edwards or Siebel caused any harm to  
15     Oracle.

16            That's the evidence that Oracle is required to  
17     come forward with to sustain a permanent injunction under  
18     the law, and that's the evidence that is entirely missing  
19     from this record.

20            Remember the four-column chart I put up that  
21     shows the specific grounds for the Ninth Circuit's  
22     affirmance. To get an injunction Oracle would have to tie  
23     each of those grounds, each of those specific acts, to loss  
24     of goodwill or some other allegedly irreparable harm. And  
25     it can't do that. It didn't even try to do that. It

1 speaks in these vague generalities. Even today Mr. Hixson  
2 talked about infringement caused irreparable harm.

3 Well, we're not talking about infringement in  
4 the air, Your Honor, we're talking about specific acts of  
5 infringement that survived the motion to dismiss, summary  
6 judgment, trial, verdict, post-trial motions, and appeal,  
7 and those specific grounds, local hosting for PeopleSoft,  
8 future customer cross-use for JD Edwards and Siebel, there  
9 is no evidence that they would cause any harm to Oracle.

10 And there's a good reason for that too. Before  
11 the trial even started in this case, Your Honor, Rimini had  
12 changed its processes so that it does not engage in local  
13 hosting of the PeopleSoft product or future customer  
14 cross-use of the JD Edwards and Siebel products.

15 This is not a matter of speculation. We put in  
16 evidence sworn declarations on this. Oracle has never  
17 deposed the affiants. It's never put in any contrary  
18 evidence. Remember, Oracle has the burden of proof.

19 But we have put in evidence that shows they  
20 can't win. They have no contrary evidence.

21 They simply say, and you heard Mr. Hixson say it  
22 again today, Well, we think Rimini's going to continue to  
23 infringe.

24 There's two problems with that, Your Honor.  
25 First is -- I'm going to sound like a broken record on

1     this -- we have a second case. We have *Rimini II*, the  
2     whole question of which, remember, was filed by Rimini. We  
3     are the plaintiff seeking a declaration that the current  
4     processes do not infringe. So if Oracle really thinks  
5     Rimini is still infringing, there's a second case to sort  
6     it out.

7             And the second is what the Supreme Court told us  
8     about the power of injunctive relief, and this is the NLRB  
9     case. And we cite this at page 23 of our opposition:

10            "The mere fact that a court has found that a  
11            defendant has committed an act in violation of a  
12            statute does not justify an injunction broadly  
13            to obey the statute and subject and the  
14            defendant to contempt proceedings if he shall at  
15            any time in the future commit some new violation  
16            unlike and unrelated to that which he was  
17            originally charged."

18            And that's really what the injunction that  
19     Oracle is asking the Court to enter would do. It would set  
20     forth a whole new set of prescriptions, requirements,  
21     prohibitions, and so forth that have nothing to with local  
22     hosting or future customer cross-use, and it would be traps  
23     for a contempt proceeding. An injunction, Your Honor, is  
24     perspective. It's designed to prevent future misconduct.

25            There is not one wit of evidence in this

1 extensive record that Oracle -- or, excuse me, that Rimini  
2 is ever likely to repeat in the future the local hosting or  
3 future customer cross-use problems that the Ninth Circuit  
4 based its liability verdict on.

5 And this is not a matter, as Mr. Hixson  
6 derogatorily says, of voluntary cessation. This is a  
7 matter of a new company, a young company, a new entrant to  
8 the market that read the licenses one way, that was  
9 informed by a court of a different reading, and immediately  
10 brought its conduct into compliance with the court's  
11 orders. That's a law abider, not a law breaker.

12 Rimini is committed to following the law.  
13 Rimini is committed to providing support within the terms  
14 of the licenses. If Oracle would tell us how to do it, we  
15 would be happy to have that conversation. But they don't.  
16 They just say whatever we do is illegal. But the Ninth  
17 Circuit doesn't agree.

18 One more problem with irreparable harm, Your  
19 Honor. Even if Oracle could prove harm, and it didn't, and  
20 even if it could prove that such harm would cause -- you  
21 know, be irreparable in the future, and it can't, it can't  
22 prove that any harm was caused by the specific acts of  
23 infringement.

24 We've made this point again a half dozen times,  
25 and Oracle never responded to it until its reply brief in

1     this case. The causal nexus requirement, which is applied  
2     in both the Federal Circuit in patent cases and the Ninth  
3     Circuit in copyright cases, is a component of the  
4     irreparable injury requirement. It is necessary for the  
5     proponent of the injunction to tie the alleged irreparable  
6     harm to the specific acts of infringement that it seeks to  
7     enjoin.

8             Oracle hasn't even tried to make this showing,  
9     Your Honor. It cannot make this showing because there is  
10    no evidence for it.

11            In its reply brief, as I say, Oracle, for the  
12    first time in this litigation, addressed the causal nexus  
13    requirement. It says this. I put it up on the slide, on  
14    slide 19. Its basic argument is, the word "directly"  
15    doesn't appear in the Ninth Circuit's "Perfect 10"  
16    decision.

17            Our argument was Ms. Catz did not testify that  
18    Oracle's purported loss in goodwill was directly tied to  
19    specific infringing features; and Oracle's response is the  
20    word "directly" appears nowhere in the Ninth Circuit's  
21    decision.

22            But let's unpack that, Your Honor. First, the  
23    word "directly" does appear in every one of the Federal  
24    Circuit causal nexus decisions, so Oracle's belated  
25    argument on this point is a concession that they can't meet

1 the Federal Circuit requirement, which we submit is the  
2 controlling requirement on this point. So we know that so  
3 much.

4 Second, they want to focus on "directly," but  
5 they don't focus on the more important point, which is  
6 Ms. Catz did not testify that the purported loss in  
7 goodwill was tied in any way whatsoever, directly,  
8 indirectly, or otherwise to the specific acts of infringing  
9 conduct. They don't have any response to that because, of  
10 course, she did not make any such evidence.

11 And for that reason, Your Honor, and this is the  
12 third point, Oracle can't meet the Ninth Circuit's standard  
13 on its own terms. The Ninth Circuit's standard, and it's  
14 on slide 20:

15 A party must show a sufficient causal  
16 connection between irreparable harm to its  
17 business and the particular acts conducted by  
18 the defendant.

19 They don't have any evidence of that, Your  
20 Honor. They can't make that showing. They've never tried  
21 to make that showing, and they don't today.

22 All that Mr. Hixson said today on this point was  
23 that infringement, quote/unquote, causes the harm.

24 Your Honor, infringement is a word of much  
25 malleability. And we're not talking at this point in this

1 litigation about infringement in the air, we're talking  
2 about the specific acts of infringement that were sustained  
3 by the Ninth Circuit as the basis for liability, and there  
4 is no evidence tying those to this.

5 A couple more points, and I'll wrap up. First,  
6 Your Honor, Oracle has repeatedly raised, and Mr. Hixson  
7 did it again today, this false argument this if Rimini has  
8 really ceased its infringing conduct, then it has nothing  
9 to fear from an injunction.

10 The problem is, the injunction proposed by  
11 Oracle has no relation to the conduct that has been  
12 adjudged to be infringing. The injunction proposed by  
13 Oracle is so far beyond it, it's like what the Supreme  
14 Court described in that NLRB case, they say that because  
15 Rimini committed one narrow infringing act or two narrow  
16 infringing acts, they can be enjoined from a world that  
17 Oracle's lawyers dreamed up. And I'll give you just a few  
18 examples of this, Your Honor.

19 I'd like to point out that at appendix 3 to our  
20 opposition, which I've reproduced at tab 4 of the booklet,  
21 we put in a copy of Oracle's proposed injunction with a  
22 line-by-line, word-by-word set of objections to it. I'm  
23 not going to go through that today. I just want to be  
24 clear that we have objected to virtually every part of it  
25 and explained in very specific terms why.

1           But at a higher level of generality, let's think  
2 about what the problems are here.

3           Your Honor, the proposed injunction would  
4 require Rimini's customers to affirm in writing that the  
5 services are required by the licenses. That requirement  
6 has no basis in the Copyright Act, no basis in the  
7 licenses, no basis in any ruling of this Court, no basis in  
8 law, equity, or common sense. It's just made up because  
9 Oracle wants to make it more difficult to provide support  
10 services. It would violate the First Amendment rights of  
11 the licensees, and it is absolutely untenable.

12           Second, Your Honor, the proposed injunction  
13 would prohibit the creation of derivative works. And Mr.  
14 Hixson spent a fair bit of time on this.

15           Derivative works is a big deal in *Rimini II*.  
16 There's going to be a lot of litigation about derivative  
17 works.

18           Oracle, as usual, is trying to prejudge that  
19 second case by getting an injunction here against  
20 derivative works.

21           Derivative works were not decided in the first  
22 case. We didn't appeal it because there's no judgment on  
23 derivative works, Your Honor. The jury's instructions,  
24 Instruction 21 on PeopleSoft, Instruction 23 on JD Edwards  
25 and Siebel, were limited to copying, the reproduction

1 right.

2 There was a stray testimony at trial about  
3 derivative works, and derivative works was listed in the  
4 jury instructions in the statutory prohibitions. The jury  
5 was not instructed on and did not find anything regarding  
6 derivative works or distribution for that matter.

7 This whole case involved the reproduction right,  
8 as the Court presumably recalls from the trial.

9 Oracle is trying now to expand the judgment.  
10 That's not the proper role of an injunction. The proposed  
11 injunction would broadly prohibit cross-use using -- you  
12 know, Oracle made up the word cross-use for this  
13 litigation, and then for the injunction it made up a bunch  
14 of other words, support and benefit and so forth to expand  
15 the concept of cross-use and put them into an injunction.  
16 Well, that's not right, Your Honor. Cross-use wasn't  
17 decided by the Ninth Circuit, as we've discussed. And the  
18 licenses are what the licenses are.

19 Oracle doesn't get, by the way, an injunction  
20 against a breach of contract. There's no such thing. You  
21 don't get to enjoin a breach of contract. But that's what  
22 this whole cross-use section of the Oracle proposed  
23 injunction is.

24 The proposed injunction would prohibit accessing  
25 source code, even though the Ninth Circuit recognized that

1     accessing source code is required for providing support  
2     services. This is just blatantly contrary to the Ninth  
3     Circuit opinion. It's also a flagrant violation of the  
4     First Amendment.

5             Imagine if Oracle presented an injunction to  
6     this Court that said Rimini can't read a book published by  
7     Oracle or can't watch a movie put out by Oracle. You know,  
8     to say that we can't look at the source code is not  
9     consistent, Your Honor, with the First Amendment.

10            And the proposed injunction would impose site  
11     restrictions, local hosting-type stuff on products,  
12     including JD Edwards and Siebel, that not only do not have  
13     site restrictions in the licenses but that the Ninth  
14     Circuit expressly said do not have site restrictions in the  
15     licenses.

16            So, Your Honor, over and over again, Oracle is  
17     imposing or proposing injunctive prohibitions that do not  
18     tie to the Ninth Circuit opinion, they don't even tie to  
19     the verdict and judgment in this Court.

20            Your Honor, this is not a copyright injunction  
21     at all. It's an effort by Oracle to impose an uber license  
22     on Rimini and all of its own customers with terms that were  
23     never negotiated and have this Court sit to supervise, as  
24     sort of the board of license appeals, all of these -- this  
25     wish list of things that Oracle would like to have, but

1       that the Copyright Act does not require.

2               It would be an abuse of discretion, Your Honor,  
3       an abuse of discretion, to enter this injunction. But we  
4       don't need to go there.

5               During the oral argument, and this is the last  
6       point I'd like to make, I think it's important to reflect  
7       on an important question that Judge Friedland posed again  
8       to Oracle's counsel. And I put this up on slide 23.

9               And Judge Friedland said:

10              "I don't really understand why there also  
11              needs to be an injunction, when it seems like  
12              Rimini is trying to comply, and where there is a  
13              whole lawsuit to figure out if they're complying  
14              with the liability determinations."

15              Your Honor, Oracle didn't have a good answer  
16       then, and it doesn't have a good answer now. It didn't  
17       address this in its briefing. Today Mr. Hixson gave you  
18       two arguments. First, he said that *Rimini II* can't deal  
19       with the situation of potential clients who were deterred  
20       from signing up with Oracle and decide to go instead with  
21       SAP or Salesforce because Rimini's existence in the  
22       marketplace.

23              I think the legal term for that, Your Honor, is  
24       hoo-ha. There is no evidence of that, not in this case,  
25       anyway. It's never even been suggested by Oracle. That's

1 the first time Oracle has ever made that argument.

2 You know, they've got the burden of proof here,  
3 and to come in here and just pull out a wild hair I don't  
4 think will do it.

5 Second, with more substance, Mr. Hixson said,  
6 Well, we have the right to exclude. Oracle, he said,  
7 didn't choose to license its software.

8 Come again, Your Honor? Oracle chose to license  
9 its software. Oracle has millions of licenses. Oracle has  
10 licensed every piece of software at issue in this case.  
11 Every product line is licensed by Oracle to its customers  
12 who are also Rimini's clients.

13 Every single license permits the licensee to  
14 contract for third-party support. It did choose to become  
15 a licensee, and it doesn't have a right to exclude. It  
16 gave up that right when it entered into those licenses.  
17 And to now come to this Court and to say that the right to  
18 exclude is at stake mistakes what the entire lawsuit is  
19 about, which is the term of those licenses.

20 The real answer, Your Honor, I submit, is the  
21 one that Mr. Clement gave in the Ninth Circuit. The only  
22 answer he had was the ability to hold Rimini in contempt.  
23 They would like an injunction, because they would like more  
24 litigation. As if this case hasn't spawned enough lawyers  
25 and papers and court hearings and trials, Oracle would like

1 contempt proceedings on top of all that.

2 It wants the Court to enter this very broad,  
3 very vague, very amorphous injunction so that every time  
4 Rimini turns around Oracle can file another contempt  
5 proceeding and come to this Court and say, Let's have it  
6 out.

7 Your Honor, we would be back before this Court  
8 again and again and again. The Court has observed that  
9 these are litigious parties.

10 I think there's no doubt about that on the  
11 contempt. But, again, it's not necessary. We have the  
12 second case. If Oracle has legitimate concerns about the  
13 current processes, the way that Rimini is actually  
14 performing its support function, those can and will be  
15 decided in the second case. It's time for the first case  
16 to come to an end.

17 If the Court denies the injunction, it's over.  
18 If the Court grants the injunction, I'm sorry, Your Honor,  
19 but we have no choice but to appeal. That's the stark  
20 choice here.

21 We submit that it's time for this case, the  
22 first case, to simply come to an end and let the parties'  
23 remaining disputes, which involves the current processes,  
24 be resolved in the context of the second litigation, which  
25 is ongoing. Therefore, the injunction should be denied.

1                   Unless the Court has any questions?

2                   THE COURT: All right. No, I don't. Thank you  
3 very much, Mr. Perry.

4                   MR. PERRY: Thank you, Your Honor.

5                   MR. HIXSON: To circle back on the right to  
6 exclude, what I said, obviously, was that Oracle did not  
7 license its software to Rimini, its competitor.

8                   Of course Oracle licenses its software to  
9 customers that pay Oracle money for that. That's  
10 completely different from the right to exclude that it  
11 wants to use here against a competitor that's infringing  
12 its products and using its products against Oracle.

13                  I guess as an overall summary of Mr. Perry's  
14 argument is that most of it was about the wrong lawsuit.  
15 It was as though he were presenting oral argument in  
16 *Rimini II*.

17                  He began by talking about the doctrine of  
18 preclusion, and he cited to you Section 27 in the  
19 Restatement Second of Judgments. This is his explanation  
20 for why grounds that were actually decided by the Ninth  
21 Circuit are the ones that are binding.

22                  Grounds that are reached by a court of appeal  
23 are binding in a second lawsuit between the two parties.  
24 That is what the Restatement Second of Judgments 27 applies  
25 to. That is what is binding in *Rimini I* as applied to

1     *Rimini II*. That has nothing what to do with what we're  
2     here about today, which is about *Rimini I*.

3             And we can look at this in one of the slides  
4     that Mr. Perry had where he quoted the Ninth Circuit  
5     interpreting Section 27 of the Restatement Second of  
6     Judgments, where it says:

7             "It is a well-established principle of  
8             federal law that if an appellate court considers  
9             only one of a lower court's alternative bases  
10            for its holding, affirming the judgment without  
11            reaching the alternative bases, only the basis  
12            that is actually considered can have any  
13            preclusive effect in subsequent litigation." In  
14            another lawsuit.

15            Comment A to Section 27 of the Restatement  
16     Section of Judgment clarifies what that means.

17            I looked this up while Mr. Perry was talking.  
18     It says:

19            The rule of issue preclusion is operative  
20            where the second action is between the same  
21            persons who are parties to the prior action with  
22            respect to the particular issue which the  
23            second -- whether the second action is brought  
24            by the plaintiff or by the defendant in the  
25            original action.

1           It may be that the issues the Ninth Circuit  
2       reached are what are binding in the future litigation  
3       between Oracle and Rimini or in the *Rimini II* case. But  
4       we're here to talk about what you should do on remand in  
5       *Rimini I*.

6           And under the rule of mandate and the law of the  
7       case, all of the determinations that you made and the jury  
8       made are still binding on you in this action.

9           Everything that Mr. Perry said on this point,  
10      all of his reliance in the Restatement Second of Judgments  
11      was just a complete distraction because he was talking  
12      about the preclusive effect that one lawsuit has on another  
13      lawsuit.

14           He argued, for example, that cross-use was not  
15      really decided by the Ninth Circuit in this case because  
16      they didn't reach it.

17           What the Ninth Circuit actually said is -- and  
18      he argued that it really should be treated as a contractual  
19      issue. The Ninth Circuit said:

20           "With respect to cross-use Rimini's  
21           assertion made for the first time in its reply  
22           brief to us that cross-use is a contractual  
23           rather than a copyright issue is not properly  
24           before us. The principle case on which Rimini  
25           relies was not cited in Rimini's opening brief

1           and on appeal arguments not raised by a party in  
2           its opening brief are deemed waived.

3           So look what happened. We proved on summary  
4 judgment that Rimini was committing cross-use, you ruled  
5 that that was copyright infringement. What happened on  
6 appeal? They didn't challenge that in their opening brief.

7           So we have a decisive decision by you their  
8 cross-use was illegal and infringing.

9           The reason the Ninth Circuit didn't address that  
10 with respect to at least PeopleSoft is because Rimini  
11 didn't challenge it. Rimini waived it. Again, when a  
12 litigant loses on an issue in the trial court and then  
13 doesn't appeal it or waives that appeal, then that ruling  
14 stands, and you should stand by your earlier determination  
15 of cross-use.

16           The same thing happened with respect to  
17 Database, where Mr. Perry says that this issue about  
18 Rimini, whether Rimini can rely on its customers' copies of  
19 Oracle Database wasn't actually decided. The reason it  
20 wasn't decided was because of waiver.

21           The Ninth Circuit again says that Rimini's  
22 arguments on appeal with respect to Database are the same  
23 as those with respect to the other software issue, except  
24 that here Rimini contends, as Mr. Perry says here, that his  
25 acts, in fact, were authorized by the Oracle license and

1 service agreements.

2 The Ninth Circuit continues: Oracle properly  
3 points out that Rimini has waived at this point because it  
4 has failed to challenge the district court's legal  
5 conclusion that Rimini was not entitled to assert the OLSAs  
6 as a defense.

7 So, again, you reached the issue on summary  
8 judgment, and they waived it on appeal. Their waiver  
9 should not cause you to narrow the scope of your permanent  
10 injunction. Because under the rule of mandate and law of  
11 the case, that continues to be binding in this *Rimini I*  
12 action.

13 What's preclusive in the second lawsuit is a  
14 totally distinct issue. And that's simply a distraction.

15 Apparently that distraction is a large part of  
16 their opposition to the permanent injunction motion that  
17 they're treating as if we filed a motion in the second  
18 lawsuit, which isn't accurate.

19 And so I think when they have now finally, at  
20 last, given us their explanation for why it is that you  
21 should limit the scope of your injunction to the issues  
22 that the Ninth Circuit reached, we can see that it just  
23 doesn't make any sense. It's a simply error in law that  
24 Rimini is making. They are ignoring the fact that this is  
25 a first lawsuit and not a second lawsuit. The issues of

1 clarifying estoppel and issue preclusion are simply  
2 inapplicable when we're residing still within the same  
3 first lawsuit.

4 Rimini then makes a couple of other arguments  
5 with respect to irreparable injury that at least are  
6 relevant in the first lawsuit. They say, and this  
7 continues to baffle me, that we've never cited a case in  
8 which innocent infringement was infringed. That's not  
9 true. On page 5 we collect several of them, and our reply  
10 brief cited them as we have before.

11 Mr. Perry argues that Rimini's infringement was  
12 innocent because they read the licenses and simply  
13 interpreted them differently than Your Honor did and that  
14 the jury did. That's not true. The testimony at trial was  
15 for the most part that Rimini didn't read the licenses.  
16 They weren't aware of what they said. That was their  
17 principal defense.

18 Mr. Perry argues that Oracle has failed to tie  
19 the specific infringing acts to the harm to their goodwill  
20 because Safra Catz testified that Rimini's statements and  
21 conduct damaged the bonds to the customers, and they say  
22 that that's not sufficient.

23 But Oracle doesn't have to prove its entire case  
24 through one witness, which is actually what Mr. Perry was  
25 arguing right now. Oracle proved its case through multiple

1 witnesses and a lengthy trial.

2 A key aspect of our proof showing the harm to  
3 business reputation goodwill was testimony by Mr. Ravin  
4 himself, and testimony by Oracle's witness, Professor  
5 Davis, that Rimini's infringing acts produced efficiencies,  
6 that because they didn't develop any of their own  
7 software -- Mr. Ravin was quite proud of this, that they  
8 didn't develop their own competing software product -- they  
9 didn't entail any of those development costs, so they were  
10 to offer support at 50 percent off.

11 And Mr. Davis showed the massive cross-use that  
12 enabled them to gain efficiency and then to scale. They  
13 tied the specific infringing acts that Rimini committed to  
14 Rimini's ability to deliver support at a lower cost, and  
15 then Ms. Catz and Mr. Screven tied the loop by explaining  
16 that Rimini going out with this cut-rate offer, when it  
17 didn't have any of these expenses to incur, damages the  
18 harm to goodwill.

19 So Oracle used several witnesses to establish  
20 the linkage between specific infringing acts and the  
21 irreparable harm to Oracle.

22 With respect to voluntary association, again,  
23 Mr. Perry ignores the point that I focused on in my opening  
24 remarks and that the Court focused on in your September  
25 2016 order, which is that when the cessation comes only

1 after a dispute of litigation and a court has ruled on  
2 summary judgment that the defendant's practice is unlawful,  
3 then there's no guarantee they won't resume in the absence  
4 of an injunction, and in that situation courts don't regard  
5 that as a valid cessation -- a voluntary cessation because  
6 it was under judicial compulsion.

7 That's exactly what happened here. And just as  
8 you followed in your 2016 opinion, I think you should do  
9 that here for the same reasons as well.

10 With respect to their objections to the scope of  
11 the injunction, most of these things we litigated two years  
12 ago, and again we addressed them with respect to our reply  
13 brief. Their big issue, once again, is that they only want  
14 the injunction to reach the specific issues where the Ninth  
15 Circuit addressed them on the merits.

16 That's their big push for you here today.  
17 That's how their entire opposition is briefed is they think  
18 that only those things that the Ninth Circuit specifically  
19 reached.

20 But that's just a legal error. That's confusing  
21 of the doctrine of preclusion, which deals with the effect  
22 of one lawsuit -- the outcome of one lawsuit on a second  
23 lawsuit with what you should do when you're still within  
24 the first lawsuit.

25 In this lawsuit you made legal determinations of

1 copyright infringement liability, and the jury also made  
2 those determinations. That verdict was affirmed. No part  
3 of it was reversed. It wasn't limited. It wasn't  
4 modified. The Ninth Circuit didn't criticize anything you  
5 or the jury did with respect to copyright infringement  
6 liability. They didn't reach necessarily every issue  
7 because Rimini waived a lot of them and didn't raise  
8 others. But that verdict was affirmed.

9           So for purposes in this case there's no reason  
10 for you to go back and revisit your or the jury's prior  
11 holdings.

12           The effect of your holdings in this case is a  
13 legally distinct question from the preclusive effect of  
14 this action and subsequent litigation between the parties.  
15 I acknowledge that. The Restatement Second of Judgment,  
16 Section 27, does draw that distinction.

17           But it's fundamentally wrong for Rimini to treat  
18 this remand, this renewed motion as if it were a second  
19 lawsuit, a totally distinct action and that Oracle needs to  
20 show the issues of preclusion apply. We don't need to show  
21 that because we're still within the first lawsuit. And  
22 that resolves the bulk of Rimini Street's opposition and  
23 shows that it has no merit. And, again, we ask that you  
24 enter a renewed permanent injunction.

25           Thank you, Your Honor.

1 THE COURT: Thank you, Mr. Hixson.

2 Well, we've gone for an hour and a half. Let's  
3 take a 10-minute break. We'll resume at 3:20 sharply.

4 COURTROOM ADMINISTRATOR: Please rise.

5 (Recess from 3:06 p.m. until 3:21 p.m.)

6 COURTROOM ADMINISTRATOR: Please rise.

7 THE COURT: All right. Have a seat, please.

8 So we'll talk about attorney's fees now.

9 Mr. Pocker.

10 MR. POCKER: Thank you, Your Honor.

11 Like Mr. Hixson, with the 45 minutes that's been  
12 allotted to my argument, I would ask that 15 minutes be  
13 reserved to respond to whatever Mr. Polsenberg might  
14 present.

15 THE COURT: All right. Fine.

16 MR. POCKER: Thank you, Your Honor.

17 Your Honor, I have a much simpler matter to  
18 address with you, perhaps, than what you just heard with  
19 respect to the injunction issue, and that is in connection  
20 with your prior ruling awarding attorney's fees as part of  
21 the costs that can be assessed pursuant to 17 U.S.C.  
22 Section 505.

23 Those attorney's fees were awarded in the amount  
24 of \$28.5 million, just over -- well, just under 24 months  
25 ago in your order of September 2016.

1           The Ninth Circuit has, as with the injunction  
2           issue, sent part of this issue back in light of the Ninth  
3           Circuit's decision to reverse the claims -- the verdicts in  
4           favor of Oracle with respect to the claims under the state  
5           law computer access claims.

6           And what we're asking you here to do today, by  
7           way of our renewed motion for attorney's fees, is to  
8           reinstate the award to Oracle in exactly the same amount  
9           that you adjudged back in September of 2016, that's  
10          \$28.5 million in attorney's fees.

11          And my explanation for that requires a little  
12          bit of a walk down memory lane with respect to the  
13          procedural posture here.

14          As the Court will recall, summary judgment  
15          rulings were issued in 2014, in February of 2014 and August  
16          of 2014, which resolved many of the issues between the  
17          parties.

18          Nonetheless, there was a September 2015 trial  
19          that was necessitated by the remaining claims, which  
20          resulted in a jury award of \$50 million on three claims  
21          presented to the jury in favor of Oracle.

22          That jury further awarded \$35.6 million to  
23          Oracle for copyright infringement. That was the component  
24          of the 50 million. And the other \$14.4 million was awarded  
25          for violations of the Nevada and California computer

1 statutes, which were later reversed by the Ninth Circuit.

2 On September 21st of 2016, this Court held a  
3 lengthy hearing here with respect -- or, I'm sorry, issued  
4 its order after a lengthy hearing conducted in May of that  
5 year, which made the award of attorney's fees, which we  
6 want you to reinstate.

7 You awarded \$28,502,246 after applying a 20  
8 percent reduction in the amount of attorney's fees that  
9 were originally sought by my client. You also awarded  
10 \$22.5 million in prejudgment interest on the infringement  
11 judgment and awarded \$16.2 million in costs, all under your  
12 authority under 17 U.S.C. Section 505.

13 The January 8th, 2018, ruling by the Ninth  
14 Circuit affirmed that Oracle was successful against Rimini  
15 on each of the 93 copyright claims, and the jury's  
16 \$35.6 million copyright judgment was affirmed.

17 And I know from the dialogue that you've just  
18 heard, there may be many interpretations of, at least from  
19 the Rimini side, as to what the Ninth Circuit did or did  
20 not do. But that's clear.

21 Oracle was a clear winner, both at trial and on  
22 appeal, for its copyright infringement claims on all 93 of  
23 the copyrights. The prejudgment interest, the Ninth  
24 Circuit affirmed that as well, in the amount of 22 and a  
25 half million dollars, just as the Court awarded down below.

1           In the course of doing so, the Ninth Circuit  
2           observed that you had made an extensive and detailed record  
3           throughout many years of complex and contentious  
4           litigation, and it acknowledged your understandable  
5           frustration with Rimini's litigation conduct is apparent in  
6           some of the orders now before us.

7           Nonetheless, they went ahead and ruled to affirm  
8           your ruling as to the costs as well.

9           As to copyright costs under the statute,  
10          \$16.2 million were awarded after a correction for what  
11          turned out to be simply a calculation error.

12          The Ninth Circuit reversed only two claims, and  
13          those were the state computer access claims I've referenced  
14          earlier for which the jury had awarded \$14,427,000.

15          Now, as to the attorney's fees, the Ninth  
16          Circuit didn't spend much time with it, but because it had  
17          reversed the judgment with respect to Mr. Ravin's  
18          liability, it reversed his liability for the attorney's  
19          fees, and it vacated the fee award that you had entered  
20          earlier, in September of 2016, and remanded simply for  
21          reconsideration in light of Oracle's more limited success  
22          at litigation, ostensibly, okay, there's two fewer claims  
23          that Oracle prevailed upon.

24          And basically what they are asking, or why they  
25          sent this back and why we have renewed our motion, is to

1     see whether it makes any difference at all that those  
2     particular claims were reversed at the Ninth Circuit level  
3     when it comes to this Court's assessment of what the  
4     appropriate award of attorney's fees should be.

5             Now, you would think from the opposition in this  
6     case and yet two more expert reports from lawyers in  
7     southern Nevada that this was a larger issue than the Ninth  
8     Circuit really has identified.

9             Rimini Street has decided to go down the Alice  
10    in Wonderland rabbit hole and start to talk about billing  
11    rates and legal markets and creative ways to reduce the  
12    award of attorney's fees based on percentages of success  
13    under one metric or another.

14            But I would submit to you that we've been here,  
15    we've done that, and you have already made the correct  
16    rulings with almost every facet of the analysis that the  
17    Court is required to do in order to decide attorney's fees.

18            All that's really left here is whether or not  
19    the factor that talks about the success, the relative  
20    success of the claimant for the attorney's fees is affected  
21    at all by what happened at the Ninth Circuit.

22            And we would submit to you that it is not and  
23    that the amount of the attorney's fees that you have  
24    already awarded in this case is justified even in the  
25    absence of findings on the state law computer claims

1 because they are an inextricable portion of the proof, the  
2 evidence, and the work that was necessary for this case in  
3 order to be a successful copyright infringement case.

4 And we can't lose sight, Your Honor, of the fact  
5 that we're here seeking the attorney's fees as part of the  
6 costs to which we have been deemed entitled by this Court's  
7 ruling and the Ninth Circuit under 17 U.S.C. Section 505.

8 It isn't an invitation from the Ninth Circuit to  
9 send you back into the 700 pages of expert reports and  
10 billing statements and all of that, that we dealt with two  
11 and a half years ago. We're past that. The only question  
12 here is whether or not anything needs to change in light of  
13 the Ninth Circuit's decision.

14 Well, it's funny how the more things change, the  
15 more they stay the same. The Ninth Circuit decision does  
16 not alter this Court's prior analysis or require a  
17 reduction in the awarded fees. It's a very narrow one, the  
18 remand focusing solely on whether to reduce these fees  
19 based on the reversal of state computer access claims, and,  
20 if so, if you choose to do so, by what amount.

21 Now, contrary to what Rimini suggests, and this  
22 should be no surprise given that our clients obviously  
23 disagree on the meaning of the Ninth Circuit language and  
24 decisions, but contrary to what they suggest, the Ninth  
25 Circuit decision in no way requires any reduction in the

1 prior fees award.

2 In its opposition to our renewed motion, they  
3 attempt to relitigate much of which you've already decided  
4 and some of which the Ninth Circuit has already considered  
5 and rejected, instead of focusing on this very narrow  
6 remand issue.

7 I say with respect to your prior findings, and  
8 I'm going to summarize these relatively quickly, but many  
9 of the Court's findings from the prior order are completely  
10 unaffected by this Ninth Circuit remand, including, most  
11 importantly, Oracle's degree of success on its copyright  
12 claims, which is the sole basis for seeking attorney's fees  
13 as a portion of costs in this case.

14 The fact that these two state law claims did not  
15 ultimately prevail at the Ninth Circuit alters not at all  
16 the total victory and the enormous success that Oracle had  
17 with respect to its copyright claims, copyright  
18 infringement claims.

19 It also doesn't change a thing about the  
20 analysis the Court had of the objective reasonableness or  
21 unreasonableness of Rimini Street's defenses and litigation  
22 conduct with respect to making its case. The very same  
23 factors that led to the Court's decision in the prior case  
24 are still the law -- are still the facts of this case,  
25 still the observations, and every one of the observations

1 you made before changes not at all based on the Ninth  
2 Circuit's decision.

3 Nor is anything altered about the analysis that  
4 the Court engaged in with respect to the necessity to make  
5 Oracle whole. Nor with deterrence.

6 This Court analyzed whether or not an award of  
7 attorney's fees would seek to deter not just Rimini Street,  
8 not just Mr. Ravin, but any third-party support provider  
9 from engaging in copyright infringement. And that is a  
10 valid concern, one of the factors that the case law says  
11 you can analyze, and nothing about what happened with  
12 respect to the two state law claims alters your prior  
13 conclusions at all.

14 And, lastly, the Court is required to consider  
15 the purpose of the Copyright Act in making these attorney's  
16 fees' determinations, and nothing is changed with respect  
17 to where the Court wound up last time in the analysis that  
18 it entered.

19 Now, under Section 505 of the Copyright Act, as  
20 I've noted before, the attorney's fees are a component of  
21 the costs. The Court is not required to give them, but  
22 they may make them -- may award a reasonable attorney's fee  
23 to the prevailing party as part of the costs.

24 There's no question Oracle is the prevailing  
25 party on all -- on the claims involving all 93 of its

1 copyrights.

2 I suppose we could have pled it as 93 separate  
3 claims to head off all these arguments about relative  
4 success and balancing the unjust enrichment versus the --  
5 you know, JD Edwards' copyright violation and all the  
6 sophistry that's engaged in, in trying to minimize what  
7 happened in this case. But the scope of that is enormous.

8 This is an enormous victory. Oracle is the  
9 prevailing party. No one can in good faith contest that.  
10 The Ninth Circuit has affirmed it.

11 And if we turn to the next question, which is  
12 applying the legal standards that we just referenced a few  
13 moments ago, we see that nothing has changed here as well.  
14 Oracle's degree of success remains unchanged. Not a single  
15 copyright claim was reversed on appeal.

16 We received, after the Ninth Circuit  
17 calculations and adjustments were made, more than the value  
18 of \$74 million in combined damages, prejudgment interest,  
19 and attorney's fees, which is a large and extremely in the  
20 abstract large damages award, and it is multiple times,  
21 close to six to seven times, the number of damages that  
22 Rimini Street thought was appropriate -- or their expert  
23 thought was appropriate during the litigation of this case.

24 Back then they said, Oh, their damages should be  
25 \$11 million because if we hire a few more people we

1 wouldn't have had to infringe. The jury disagreed. And  
2 now it's been up through the appellate pipeline, and we're  
3 at \$74 million. Significant success on behalf of Oracle.

4 The facts about Rimini's objective  
5 unreasonableness haven't changed either. And I know it's  
6 the past, and we revisit this history often, but it's  
7 important to do so because it's an important part of the  
8 analysis that this Court had to undertake.

9 They have engaged in litigation misconduct, and  
10 they adopted false factual and legal positions that forced  
11 Oracle to spend time and resources on unnecessary  
12 discovery, further fact investigations, experts, motion  
13 practice.

14 The Court was right when we had the hearing two  
15 and a half years ago and the Court observed at trial the  
16 impact of Oracle's unreasonable positions in this case on  
17 the length of the trial, the amount of attorney time and  
18 witnesses that were required to rebut their clearly false  
19 allegations.

20 This case became a monster because Rimini Street  
21 misbehaved. It all started, and this is in the papers,  
22 when Mr. Ravin chose to be held in contempt in connection  
23 with a deposition that was supposed to be held in the SAP  
24 TomorrowNow litigation over in California rather than to go  
25 under oath and explain how Rimini Street was operating.

1           Eventually, after being held in contempt, he  
2           did, in fact, give a deposition. It was like pulling  
3           teeth. But throughout his deposition history, both in that  
4           case and in our own litigation, he has repeatedly denied  
5           that cross-use ever happened, cross-use which is at the  
6           center of the whole infringement and the Ninth Circuit  
7           decision.

8           Five and a half years after Oracle filed suit,  
9           that's after five and a half years of multiple attorneys  
10          scrambling and seeking to find out exactly what Rimini  
11          Street was up to, five and a half years of legal fees,  
12          litigation, depositions, motions, meets-and-confers, all of  
13          the expensive attributes to complex litigation, during his  
14          trial testimony Mr. Ravin finally admitted to engaging in  
15          cross-use, in his words, quote, all the time.

16          What could have been saved, how better and more  
17          efficient this litigation might have been had there just  
18          been a little early honesty. And that's part of the track  
19          record here that builds into this factor of their  
20          unreasonable position.

21          In court filings and testimony Mr. Ravin and  
22          other Rimini Street executives similarly denied cross-use  
23          for years up until that day when under cross-examination  
24          from Mr. Isaacson he finally said, Oh, yeah, we do that all  
25          the time.

1           There were also statements made in the context  
2 of the summary judgment briefing with respect to the JD  
3 Edwards and the Siebel environments and how they were used  
4 at Rimini.

5           As you'll recall, ultimately Rimini was found to  
6 have used those environments for purposes of -- that  
7 infringe Oracle's copyrights. Back at the time of the  
8 summary judgment motion, they placed before this Court in  
9 their opposition evidence that maintained that they were  
10 just copies made for archival purposes which was permitted  
11 by the license.

12           Those representations and that false evidentiary  
13 milieu caused this Court to have some pause about granting  
14 full summary judgment on all those issues and, as a result,  
15 those issues had to be addressed at trial, where it was  
16 fully demonstrated that -- and through the testimony of  
17 Rimini Street witnesses, that those environments had, in  
18 fact, been used for purposes other than what Rimini Street  
19 maintained during the summary judgment briefing.

20           The unnecessary expenses that were added are  
21 numerous, and we've walked through them in the other  
22 context in the past.

23           One of the biggest roadblocks to doing this case  
24 in an efficient way was their destruction of the library of  
25 Oracle copyrighted material that they destroyed after

1 becoming aware that litigation over this issue was in the  
2 works.

3           They -- the Court, through Magistrate Judge  
4 Leen, initially, and then this Court adopting her findings,  
5 of course, did issue a spoliation order involving Rimini  
6 Street. And there was the adverse inference instruction at  
7 trial. But then there's the other impact of all that,  
8 which is what would have been practically the smoking gun  
9 as to what Oracle products and copyrighted materials Rimini  
10 Street was using improperly instead no longer existed and  
11 Oracle had to spend a few years of depositions, expert  
12 investigation, analysis of millions of pages of documents  
13 produced by the two sides in order to get to that point.

14           So it's no wonder that the Ninth Circuit found,  
15 quote, understandable frustration with Rimini's litigation  
16 conduct, unquote, and they understood exactly what this  
17 Court was going through and what the parties were going  
18 through.

19           All those findings relating to Rimini's  
20 litigation misconduct remain completely unchanged. This  
21 Court found earlier that Rimini's litigation position that  
22 it did not engage in copyright infringement was not an  
23 objectively reasonable position, rather it was based on a  
24 clear misreading of Oracle's software licensing agreements  
25 and a conscious disregard for the manner that Rimini used

1 and housed Oracle's copyrighted software programs on its  
2 own servers.

3 In fact, its position was so unreasonable that  
4 the Court was able at summary judgment to determine that  
5 Rimini Street engaged in massive copyright infringement of  
6 Oracle's copyrighted works, thereby leaving only a few  
7 issues for trial.

8 The Court said that then and the Court should  
9 say that now because it's still true, and nothing about the  
10 small change in what claims were ultimately upheld on  
11 appeal changes that at all.

12 Rimini's repeated instances of copyright  
13 infringement and its significant litigation misconduct in  
14 this action was also commented upon by the Court in a  
15 different context. The Court also, in its order granting  
16 attorney's fees, said it's undisputed that the defendants  
17 ignored their preservation obligations and destroyed  
18 evidence prior to trial, including a key computer directory  
19 containing Oracle software.

20 Again, observation that the Court made. Still  
21 true. Still important with respect to this issue.

22 Now, what is Rimini, in its opposition papers  
23 and in its approach to this offer, in explanation or in  
24 mitigation of the behavior that's been outlined here.  
25 Well, they feebly say that the reasonableness of

1 Mr. Ravin's conduct is not at issue, as, you know, you  
2 can't really blame him for this because he's no longer been  
3 adjudged liable for any of these claims.

4 Well, we're not seeking attorney's fees from  
5 him, so that is a complete red herring right there.

6 We hear over and over again, and I know we  
7 discussed it ad nauseam in the original attorney's fees  
8 briefing, this notion of their innocent infringer.

9 And as I discussed in the prior hearing and in  
10 the papers, you know, the whole notion of the innocent  
11 infringement versus willful had to do with the computation  
12 of the statutory enhancement should Oracle have chosen  
13 statutory damages over the other measures of damages that  
14 the jury found.

15 It's really in that context, it's almost a step  
16 lower than an advisory verdict with respect to whether or  
17 not there should be an enhancement for those statutory  
18 damages.

19 But more fundamentally, even if they're right  
20 that this is an expression by the jury that at the time  
21 they were infringing they had no reason to know they were  
22 infringing, by the time the litigation started they did.  
23 And by the time its underway and they're looking into the  
24 evidence that they've seen and they're aware of what the  
25 arguments are as to why it doesn't -- or it does constitute

1 copyright infringement and not simply a use of their  
2 clients' licenses, by then I take it they should have read  
3 the licenses by the time this case began, because they're  
4 making representations about them in their summary judgment  
5 pleadings, all that innocence went away about three months  
6 at most into the discovery process. So it really doesn't  
7 matter with respect to looking at this. It does not  
8 mitigate or make reasonable Rimini's behavior in this case  
9 at all.

10 And, again, that's another factor that the Court  
11 found in favor of Oracle with respect to and what you  
12 should do so again even if you're going to engage in that  
13 kind of analysis. Moreover, it's been said in context, in  
14 many context, Section 505 does not condition an award of  
15 fees on the showing of willful infringement.

16 This Court recognized that in its order, and  
17 here we are again with the same arguments coming from  
18 Rimini that oh, no, no, no, no, we're an innocent  
19 infringer, you shouldn't give attorney's fees against us.

20 Then they make the curious argument without  
21 actually supporting it by case law that specifically holds  
22 so, that the Court must allocate specific expenses in the  
23 legal fees to specific misconduct in the context of the  
24 reasonableness analysis of Rimini's behavior.

25 Nowhere does the case law support that

1 proposition. In fact, if you look at our reply at pages 4  
2 and 5, we distinguish all the cases that Rimini says that  
3 it says does make such a holding and a requirement.

4 And, more importantly, all the litigation  
5 misconduct that we're talking about here, it isn't your  
6 standard discovery sanction type stuff. This is behavior  
7 that unnecessarily made more complex and difficult the  
8 exploration of factual and evidentiary issues.

9 This is part of why this case became so  
10 complicated, why they survived a summary judgment they  
11 never should have. It's not, oh, you didn't file your  
12 interrogatory responses in time or you were dilatory  
13 consistently on this level.

14 So apportioning it to individual litigation  
15 misconduct, this permeates the entire way they approached  
16 this case. And as a result, that's why no apportionment to  
17 specific amounts is necessary.

18 Oracle was actually forced, and I think that's  
19 not too strong of a word, to disprove an enormous amount of  
20 false narrative, false information, and false evidence as  
21 part of putting on its infringement case. We wouldn't be  
22 there at that successful level if we hadn't had to  
23 basically treat this like a criminal case and find out, you  
24 know, you can't take at face value what you're getting in  
25 discovery here, you've got to do the extra work to expose

1 it.

2 The third factor, and I won't say much about  
3 this because the Court was right the first time, and  
4 nothing has changed, the analysis of what's necessary to  
5 make Oracle whole.

6 Now, Oracle spent far more than \$28.5 million in  
7 attorney's fees, and the Court's familiar with that based  
8 on the briefing and all the argument that went on before.

9 But the Court has properly also determined that  
10 we've spent decades developing these copyrighted software  
11 products only to have Rimini come in and piggyback, whether  
12 legally, illegally, or infringing or not, on that  
13 substantial investment. Oracle was compelled to spend a  
14 significant amount of resources in legal fees and costs  
15 over what was eventually awarded in this case just to stop  
16 Rimini's conduct.

17 Without a fee award, the Court found that  
18 Oracle's investment and its intellectual property and its  
19 incentive to create future software would not be  
20 appropriately protected or compensated. That was true in  
21 2016, and it is true now.

22 Moreover, Rimini's counter to that is this is a  
23 windfall for Oracle just because Oracle is a large company  
24 and we can pay this out-of-pocket change. Well, that's a  
25 complete red herring again and totally irrelevant to the

1 point of the necessity of making it worthwhile for Oracle  
2 to protect its hard-earned copyrights.

3 The deterrence issue. There's been some  
4 discussion of it in connection with the infringement  
5 analysis. But this Court has properly found that an award  
6 of attorney's fees is appropriate to deter Rimini from a  
7 pattern of infringing Oracle's copyrights. And that  
8 pattern, in our estimation, certainly persists.

9 It's a matter of record that a company started  
10 and highly influenced by Mr. Ravin, TomorrowNow, not only  
11 is it a civil infringer but they were convicted of federal  
12 criminal charges. And then we have the jury in our case  
13 finding infringement on the part of Rimini Street in our  
14 case, *Rimini I*.

15 And now we have *Rimini II*, where there are other  
16 alleged infringements, and obviously in our position there  
17 is infringement going on.

18 And then this whole issue of deterrence, the  
19 idea that, well, we're an innocent infringer, it was just a  
20 mistake, and we don't need to be deterred, well, they  
21 better have a wake-up call over at Rimini Street in light  
22 of what evidence has come out earlier this year, in March.

23 They told their open shareholders, first of all,  
24 that if your injunction -- and this is addressed in the  
25 papers, if the injunction actually is now entered while

1     it's being considered by the Court, that they're going to  
2     have to spend significant amount of money and change what  
3     they do.

4             Okay. Well, if that's true, that means some of  
5     what they're doing at least is still infringing. So the  
6     jury verdict didn't deter them, the battle over the  
7     injunction hasn't deterred them, and deterrence is  
8     something that is certainly something the Court can factor  
9     into under the standards in its award of attorney's fees.

10            The second thing that happened is they reported  
11     to their shareholders that they've received a federal grand  
12     jury subpoena, that they're the subject of a federal  
13     investigation.

14            Clearly some people do not learn. And this is  
15     part of the factual record that you go into whether or not  
16     in this particular case they need to pay a significant  
17     amount of attorney's fees in order to deter their behavior  
18     and anybody out there who thinks that this is now a  
19     legitimate way to compete with Oracle.

20            The Court has noted in its prior rulings that  
21     Rimini Street is built on a foundation essentially of  
22     copyright infringement. The Court hasn't used these words,  
23     but it's basically a parasitic business model. And that's  
24     why it needs to be monitored and looked at more closely.

25            And in this particular case, these statements to

1 the shareholders show that not a whole lot has changed as  
2 to how they're doing business. And under the  
3 circumstances, that adds even greater heft to the  
4 deterrence element in the Court's analysis.

5 The need to further the aims of the copyright  
6 laws is another of the factors. The Court got that one  
7 completely right in its order back in September of 2016.

8 Rimini has a strange way of dealing with that.  
9 They say that actually awarding attorney's fees to Oracle  
10 will do the exact opposite of furthering the aims of the  
11 copyright law because it will discourage starving artists  
12 and the smaller parties in these big commercial  
13 transactions from pursuing valid copyright defenses.

14 They point to Mr. Ravin having survived through  
15 the Ninth Circuit process without having an award against  
16 him for copyright infringement.

17 But what they ignore is Rimini Street has  
18 already been adjudged not to be someone who is putting  
19 forth meritorious defenses to unmeritorious copyright  
20 claims. They lost this.

21 So the idea that somehow if these fees are  
22 awarded and reinstated that that's a bad message to them,  
23 no, that's exactly the right message to them. You lose;  
24 you pay; there was nothing meritorious about your defense,  
25 starving artist.

1           I think the most important point, and I've  
2           probably belabored these other issues more than the Court  
3           needs to in its decision, but this is an extremely narrow  
4           remand, and it's solely to decide, well, is it going to be  
5           \$28,502,246 or some other amount?

6           So when we look at this as to why we are  
7           asserting that you should keep exactly the same amount of  
8           attorney's fees, part of it is there's no need to reinvent  
9           the wheel here.

10          This Court -- and you're being asked by Rimini  
11          Street to engage in all sorts of formulaic reductions of  
12          the amounts and reanalysis of issues about who won what and  
13          who is the prevailing party and who had the most success,  
14          but even in reality it comes down to you've already been  
15          there.

16          The \$45 million that we asked for in attorney's  
17          fees, the Court factored in all this nonsense that Rimini  
18          Street puts forth, and you reduce the award by 20 percent  
19          already to \$28 million.

20          They want you to go back and say, Oh, but look  
21          at all these claims that Oracle did not prevail on or were  
22          dismissed or never reached the jury. Well, you already  
23          factored that in the last time. That was part of the  
24          factual milieu before. And even after all of their  
25          arguments about, Oh, my God, they only prevailed on three

1       claims, it's still \$28 million.

2               So now it comes back to all right, so the two  
3       computer law offenses were overturned. What impact should  
4       that have on the attorney's fees that will appropriately  
5       compensate Oracle in this case? And our position is it  
6       should have absolutely no effect.

7               And the reason it should have absolutely no  
8       effect is that every dollar of that \$28 million was spent  
9       putting together this case. And I -- this case is, in this  
10      Court's words, first and foremost and above all else a  
11      copyright infringement case, all other claims  
12      notwithstanding.

13              And all these -- and the Court recognized this  
14      the first time. There was no analysis that said, Well, you  
15      know, I need to shave something off, they might have  
16      actually done some research on unjust enrichment or this  
17      witness only had to do with another claim.

18              All of the claims, but, more importantly, all of  
19      the evidence, all of the work, went toward the copyright  
20      claims. If we had just simply had 93 copyright claims or  
21      one claim with 93 copyrights and no other claims here, this  
22      case would have been tried, investigated, discovered, and  
23      analyzed exactly the same way.

24              And that -- the notion that, Oh, well, you need  
25      to peel off some of the attorney's fees that might have

1     been only about those computer access claims, well, those  
2     access claims were gravy. The facts underlying them would  
3     have been proven whether or not they were in the case or  
4     not.

5             Because remember what it's all about, it's about  
6     Rimini Street using their robots and their spiders and  
7     their massive -- as part of their massive downloading to  
8     get all of this Oracle content off of the Oracle websites  
9     to start this business, to start this course of conduct  
10    which leads to infringement of those very copyrights.

11            One of the big issues in this case, Rimini kept  
12    saying, Oh, you know, we only take what our clients are  
13    entitled to. Well, we proved that wrong. And how did we  
14    prove it wrong? By proving these massive downloads, the  
15    very conduct that was part of the other -- the state law  
16    claims, as part and parcel of here's what they're doing.  
17    They don't need all this stuff. They're taking stuff well  
18    beyond what they're entitled -- their customers are  
19    entitled to under their license.

20            This was all part and parcel of a huge scheme,  
21    and it's impossible to sit there and say oh, okay, well,  
22    \$3,000 worth of work was done on the computer fraud claims,  
23    but, you know, you can't pay that on the copyright claims  
24    because it's separate and apart.

25            The Court sat through the trial. And I think

1 it's interesting, the experts that are offered in this case  
2 are so beside the point, when the only expertise that's  
3 really required here is what happened in this case? What  
4 evidence was produced? What was our money spent on?

5 Because I think when you clear away all these  
6 formulas and testimony, that's what it's really about. And  
7 the bottom line is that \$28 million was spent doing not  
8 only just proving the mechanics of a copyright  
9 infringement, but knocking down all the false statements  
10 and all the smoke and mirrors that Rimini put up in the  
11 course of representing what they did and didn't do.

12 And that bleeds right into these other tort  
13 claims that we had as well, that they were lying to  
14 customers and lying to everybody. That's part and parcel  
15 of they -- if, in fact, they were innocent infringers to  
16 begin with, they didn't stay innocent very long.

17 And like most who engage in wrongdoing, it's the  
18 coverup that takes them in. And it was the coverup of the  
19 copyright infringement that we needed to blast through.  
20 I'm sure the Court remembers the demonstratives with the  
21 law wall of lies and all of that.

22 But, you know, that's not too far from the truth  
23 here. And all this \$28 million went to proving our  
24 copyright infringement case and knocking down the false  
25 representations and the clearing out the smoke, basically,

1       that Rimini Street was blowing most of the time.

2               This isn't the kind of case where you've got,  
3       oh, well, there's this dispute over the breach of contract  
4       A, and over here there's a dispute as to the breach of  
5       contract B. This is one big case.

6               And even if we didn't have these other claims in  
7       this case, all that stuff about Rimini's downloading and  
8       the impact it had on the servers, it's circumstantial  
9       evidence that, whoa, what are they doing? This is not  
10      servicing your client within the terms of a license.

11              That would have all been admissible under Rule  
12      404(b). I know it's usually brought up in the criminal  
13      context, and that's where it usually comes to bedevil me.  
14      But all of this was coming in, so all the money that we  
15      spent on unearthing these facts, analyzing it, cutting  
16      through the nonsense on the other side, there's no  
17      apportionment necessary at all. It all went to the  
18      successful prosecution of Oracle's copyright defense in  
19      this particular case.

20              I could go on a little bit about some of the  
21      alternatives that have been processed by Rimini Street as  
22      to how this Court should address this issue. They'd like  
23      to revisit this whole ridiculous notion that we need to  
24      count up all the claims in the case and see who won more of  
25      them, and divide the number -- the amount of fees by the

1 number of successful claims and all of this.

2           Been there, done that. There's no need to go  
3 there again in light of this very limited development on  
4 appeal.

5           We hear the novel notion of the Ravin offset  
6 that should be taken against our attorney's fees. Never  
7 mind that said Seth Ravin hasn't moved for attorney's fees  
8 in this case. He hasn't put together the affidavits, the  
9 reports, everything that he would need to do so.

10           He's not a prevailing party, or if he is, he  
11 hasn't come forward with the attorney's fees -- attorney's  
12 fees' motion. There's no evidence that he even paid  
13 attorney's fees, and yet somehow that should be an offset  
14 against the attorney's fees that Rimini Street is  
15 responsible as a result of its infringement of copyrights.

16           So that's a complete red herring right there.  
17 And the fact that Dennis Kennedy and the other fellow say,  
18 Oh, that sounds like a reasonable way to deal with it,  
19 matters not at all.

20           The only expertise that's of any value here is  
21 the expertise that, quite frankly, Your Honor, only you  
22 possess, which is the knowledge of what's happened in this  
23 case for the last eight and a half years and marrying that  
24 up to the legal standards. That's the only expertise we  
25 need here.

1           There was also a proposal from Rimini Street to  
2 just reduce it by 50 percent because after all there's two  
3 defendants, and none of the claims against Mr. Ravin  
4 survived. There's no indication that half the fees were  
5 spent pursuing Seth Ravin and half the fees were spent  
6 pursuing Rimini Street on its own. That is a completely  
7 plucked-out-of-the-air type of proposal which has no real  
8 logical coherence and is there only in an effort to reduce  
9 the award.

10           I come back again to this notion of the limited  
11 success. The Ninth Circuit's language was in light of the  
12 more limited success of Oracle. And certainly that's just  
13 saying, Well, you know, there are these claims that they  
14 prevailed upon, now there's two fewer, what do you think?  
15 Does it change your mind or not?

16           Rimini has basically accepted it as a license to  
17 reopen this whole issue about whether there should be  
18 attorney's fees in the first place, what dollar amounts  
19 they should be. It's not that at all. With respect to,  
20 you know, all their ways to bake into the new award the  
21 lack of success, they completely ignore the fact that we  
22 did this before.

23           The \$28.5 million in attorney's fees embraces,  
24 as the law permits, not only the fees on the claims for  
25 which we were successful but for the claims which we may

1 have been unsuccessful, so long as they were part of the  
2 common factual core and nucleus of the infringement case.  
3 And that's all we're saying, Your Honor.

4 The Rule 68 argument, I'm not even really going  
5 to go there. I think it was adequately litigated the first  
6 time we did this motion.

7 The offer made by Rimini Street was not more  
8 favorable than the ultimate outcome for Oracle, not before,  
9 not after the Ninth Circuit appeal. And it's especially so  
10 in light of what you've heard about the injunction.

11 Because if you look closely at their offer of  
12 judgment, their injunction allowed cross-use to continue.  
13 So how could that possibly be of benefit or of significant  
14 benefit to Oracle?

15 By adding that into their offer of judgment,  
16 they basically made it worth far more than its face value.  
17 And then, of course, there's a whole issue of the payment  
18 over time and all of that. The Court was right the first  
19 time, it would be right now to simply adopt the analysis  
20 that it made before.

21 Your Honor, I know I've spoken a long time  
22 concerning the issue that's so simple, but it really is.

23 What happened at the Ninth Circuit affects not  
24 at all the justness of awarding Oracle the \$28.5 million in  
25 attorney's fees you awarded two years ago. It all went to

1 proving the successful part of this case. The law says if  
2 there's related claims that are so related to the corpus of  
3 the evidence, that they too can be the subject of  
4 reimbursement.

5 But in this particular case you really don't  
6 even have to go there. Every dollar spent was well spent,  
7 and it was spent on something that is reimbursable under  
8 the copyright statute at issue. Thank you.

9 THE COURT: Thank you, Mr. Pocker.

10 MR. POLSENBERG: Good afternoon, Your Honor.  
11 Dan Polsenberg for defendant. I'm going to be refreshingly  
12 brief.

13 THE COURT: Good afternoon, Mr. Polsenberg.

14 MR. POLSENBERG: I think I have friends on both  
15 sides of the room that have to catch flights.

16 Oracle says their position is simple, it's  
17 basically been there, done that. They effectively want you  
18 not to do what the Ninth Circuit asked you to do. They say  
19 that I want you to reexamine the award of attorney's fees.  
20 Well, that is true. I do.

21 But that's not why we have a hearing today.  
22 It's because the Ninth Circuit did remand for  
23 reconsideration, in light of the degree of success, the  
24 more limited degree of success.

25 And they present nothing. Oracle is right, it

1 is a simple argument that they're making, but it is too  
2 simple because they're not trying to help the Court at all  
3 in doing what it needs to do.

4 Under *Hensley* -- and they claim *Hensley* doesn't  
5 apply because it's a 1988 case, but I think it's a  
6 wonderful explanation of how to appropriate fees.

7 And in *Hensley* the court points out that you  
8 have to look at fees based on the degree of success. Now,  
9 there are two obligations under *Hensley*. There's the  
10 obligation -- there's the burden of the plaintiff in  
11 presenting their claim for fees to show why they are  
12 entitled to them, and there's also the responsibility of  
13 the court to explain how it has apportioned.

14 But here they don't want to apportion at all.  
15 And that, I think, is a terrible mistake on Oracle's part,  
16 and it would be an even worse mistake on this Court's part.

17 In *Hensley* the Supreme Court keeps talking about  
18 the burden of establishing entitlement, the relationship  
19 between the amount of the fee awarded and the results  
20 obtained. Again, they say the extent of success and the  
21 amount of the fees' award.

22 Now, Mr. Pocker says that I go into some -- I  
23 don't remember if he used the word "ridiculous," but  
24 detailed machinations about the number of claims. And  
25 there's probably a little bit of support for his position

1 in *Hensley* on that.

2 I don't think you have to do an arithmetic  
3 computation of the issues. But the Court was very clear  
4 that you do have to look at the degree of success involved.

5 Let me go through their claims. Now, yes, they  
6 had 12 cause of action, and they prevailed on one of them,  
7 we prevailed on 11. That would be 8.4 percent.

8 But I'm not going to rely on that because I  
9 think it is true that if they brought 93 copyright claims,  
10 I would still have most of the same argument that I'm going  
11 to make today. Let me explain what I'm talking about.

12 I don't use PowerPoint. Mr. Perry is very good  
13 at it. When I passed the bar, they had not yet invented  
14 electricity. So I use physical objects.

15 They brought a claim against Rimini for  
16 copyright infringement. They brought a claim against Seth  
17 Ravin for copyright infringement. They brought it for  
18 willful infringement so they could get additional damages  
19 so that they could get lost profits. Against both of them.

20 They wanted punitive damages against both of  
21 them. They also brought the state law of computer access  
22 and fraud claims. And they brought in a couple other  
23 claims, including -- we talked about trespass earlier  
24 today, seems like yesterday, earlier today, they brought  
25 trespass claims.

1           So a lot of these claims went by the wayside.  
2       Some were withdrawn. We went to trial essentially on these  
3       elements. The jury found there was infringement, but  
4       innocent infringement, found no willfulness, therefore no  
5       punitive damages. Seth Ravin prevailed entirely on the  
6       infringement claims, and then the Ninth Circuit reversed  
7       the computer access and fraud claims.

8           Here's their degree of success. It's not --  
9       it's not just that, Oh, we prevailed on our copyright  
10      claims. They didn't prevail the way they wanted to  
11      prevail. They wanted all this and then all this again  
12      against Seth Ravin.

13           They wanted -- I kept saying -- for weeks I've  
14      been saying they were swinging for the fences, and this  
15      morning Seth -- or, excuse me, this morning West said they  
16      went for the kill. And that's what they did here.

17           Their degree of success is that they only got so  
18      much on their copyright claims, not that they prevailed on  
19      all 93 registrations, but they only got so much.

20           That's why we pointed out they really only got  
21      14 percent of a quarter of the billion dollars in damages  
22      they wanted. They only got 27.7 percent of the copyright  
23      damages that they were seeking. This isn't just the  
24      elimination of 14 million -- I don't know, I can't believe  
25      I actually say things like just \$14 million, but this is

1 looking at all the issues that go to their limited degree  
2 of success and now after the Ninth Circuit their even more  
3 limited degree of success.

4 So what do they propose? They say been there,  
5 done that. They don't even try to apportion. They have to  
6 do that to help you. Their failing to do that means that  
7 they don't get any fees whatsoever. And it leaves you in  
8 the situation where you have to examine all of this.

9 Oracle says, Well, the limited scope of the  
10 remand was look at the elimination of the two computer  
11 access and fraud claims. The remand doesn't say that.  
12 You're supposed to reconsider in light of the more limited  
13 success that they have.

14 They talked about law of the case earlier today.  
15 In their reply brief on attorney's fees on pages 1, 2, and  
16 7, they argue law of the case. This isn't law of the case.

17 The Ninth Circuit did not affirm anything. They  
18 vacated. They sent it back down. You can reconsider  
19 anything now on the attorney's fees.

20 Now, I'm not going to go to all the detail that  
21 Mr. Pocker went to in talking about all the other topics,  
22 but the degree of success has been recognized by courts as  
23 one of the primary factors in determining the objective  
24 reasonableness or unreasonableness of a losing party. So  
25 effectively what we're looking at, here they're coming in

1 saying, Well, we lost on copyright infringement, but that's  
2 not the claim we were facing. We were facing willful  
3 infringement, lost profit damages, punitive damages. We  
4 were looking at all that.

5 Were we reasonable in going into court? We were  
6 reasonable in fighting the big claim that they brought.

7 Now, they're coming in and saying we were  
8 unreasonable about the little claim that -- on which Oracle  
9 prevailed. But look what we did in light of that. We made  
10 an offer of judgment for a hundred million dollars.

11 Now, I'm not arguing the offset of the damages  
12 amount right now. I'm talking about the position in which  
13 we found ourselves. We're in litigation, this company is  
14 trying to kill us. And they have this huge claim, and  
15 they're spending a great amount of attorney's fees fighting  
16 the bigger claim, the six salt shakers as opposed to the  
17 one.

18 And we make an offer of judgment for a hundred  
19 million dollars. That's more than they got. It's more  
20 than the \$35 million they got for this. Even if you add  
21 interest and cost, that's 74 million.

22 We were looking at this case in a situation  
23 where, yes, we were reasonable in trying to resolve that.  
24 Justice Kagan in *Kirtsaeng* talks about the factors to  
25 consider in the award of fees, and she talks about how it

1 hinges on a party's attitude toward risk.

2 So if you have a weak claim and you're the  
3 plaintiff, you don't pursue it anymore. You have a weak  
4 defense, and you're the defendant, you abdicate your  
5 defense.

6 But we had -- while we didn't prevail on every  
7 aspect, we had a winning defense on the vast amount of the  
8 damages that they were seeking.

9 And we even tried to settle it at about the  
10 borderline. And we even were north of the borderline. So  
11 we were reasonable -- you know, I've got to get these all  
12 back to Peg's. We were reasonable in the positions that we  
13 were taking then.

14 Now, they come in and say, Well, that's not the  
15 only position that you look at, you look at the conduct and  
16 the misconduct. And I stand by what we said in our briefs.  
17 If there was misconduct and, yes, *Kirtsaeng* does talk about  
18 that, in a line, the court may order fee shifting because  
19 of the parties' litigation misconduct, whatever the  
20 reasonableness of his claims or defenses.

21 And they cite a Second Circuit case, *VivaVideo*.  
22 But in *VivaVideo* that was a case where they found  
23 willfulness. This wasn't a dispositive resolution saying  
24 if somebody engages in misconduct, you can shift all the  
25 fees.

1           And, yeah, *Goodyear* was an inherent power case,  
2           *Goodyear versus Haeger*. But I don't think the reasoning is  
3           any different here. If there's misconduct, the fees that  
4           are shifted must be related to the fees that they incurred  
5           because of the misconduct.

6           They don't get everything. Especially in light  
7           of what's already happened here. Judge Leen sanctioned us  
8           for our misconduct. The Court gave an adverse inference  
9           instruction. There are already remedial things and penal  
10          things that the Court has implemented. So it would be an  
11          abuse of discretion, I would argue, for the Court -- for  
12          the Court to go further.

13          And right after Justice Kagan cites *VivaVideo*,  
14          she cites another case, *Bridgeport Music*, and that's a case  
15          where they're talking about -- a plaintiff has hundreds of  
16          claims, and some are overbroad and some are reasonable, and  
17          the court has to take all of that into consideration.

18          Well, that's what this Court needs to do. They  
19          have claims that they were reasonable on prevailed. But  
20          they sought -- in the litigation itself they've sought far  
21          too much.

22          Does the limited degree of success factor into  
23          other issues? Yes, of course, it does.

24          Making the plaintiff whole. The purposes of the  
25          Copyright Act. Do we really want to be in a position where

1 we are encouraging people, plaintiffs, to sue for far too  
2 much and have the other side pay all the fees for that?

3 So it's getting late in the day. How much  
4 should we apportion? I have a lot of ideas.

5 Do we have appendix A?

6 In tab 5, Your Honor, you have appendix A, our  
7 opposition to the motion to renewed motion. Wow, that's  
8 great.

9 That lays out different ways to reach numbers  
10 that we have methodologies for that range from almost as  
11 low as a million dollars to almost as high as 8 million  
12 dollars.

13 Now, they don't like any of our methodologies,  
14 but they don't have anything that they presented.

15 And failing to have presented anything, I think  
16 they're in the position where they shouldn't get anything.  
17 But let's -- let me take you through a couple of different  
18 ways to do this.

19 We start with your 28.5 original award. I  
20 suggest we look at the offset, which we've called the Seth  
21 Ravin issue.

22 Mr. Pocker accurately points out we didn't move  
23 for attorney's fees for him. But I think he misses the  
24 point on what we're talking about. If we spent \$4.7  
25 million defending those claims, it would be a reasonable

1 assessment of how much they would have spent also pursuing  
2 those claims.

3 So that gives us \$23.8 million. We're right at  
4 this column here, which you can't see me even if I go over  
5 there.

6 Now, their degree of success for damages, even  
7 for just their copyright claims, was only 27.7 percent,  
8 which would give them \$6.6 million.

9 But I also think that we should have a further  
10 reduction in the amount of attorney's fees that you  
11 allowed. You allowed 80 percent of their attorney's fees,  
12 and that was in light of all the aspects of the litigation.  
13 But I think when they have pursued too much, when they have  
14 sought these large damages and only recovered a fraction of  
15 them, they should have a 30 percent markdown instead of a  
16 20 percent markdown, reducing 20 percent to 70 -- or  
17 reducing 80 percent to 70 percent, 70 percent is 87.5  
18 percent, gives them 5.775 million.

19 Let's do an easier one. Let's start with your  
20 28.5, reduce that by their 27.7 percent, that gives them  
21 7.9 million. Because I think you have to look at all the  
22 aspects.

23 But even if you looked only at the two claims  
24 the Ninth Circuit reduced, you have an offset for 29, 28,  
25 29 percent of the damages, you have an offset of 50 percent

1 of the parties, you have an offset of 67 percent of the  
2 claims, the average of those is 49 percent.

3 They argue that their approach furthers the aims  
4 of the act. But in *Kirtsaeng* and in *Fogerty*, Justice Kagan  
5 and Chief Justice Rehnquist talk about how the act strikes  
6 a balance.

7 It isn't just allowing a plaintiff to bring a  
8 claim. It's looking at the public purpose, the purpose of  
9 enriching the public through the general -- the general  
10 public through access to creative work.

11 So we have to strike a balance through between  
12 two subsidiary aims, encouraging and rewarding authors'  
13 creations, while also enabling others to build on that  
14 work.

15 This is an innocent act of infringement. The  
16 Ninth Circuit -- even back before *Fogerty*, when the Ninth  
17 Circuit followed the approach where plaintiffs get all  
18 their fees, the Ninth Circuit said one of the  
19 considerations which justified the denial of fees is the  
20 defendant's status as an innocent rather than a willful or  
21 knowing infringer.

22 I don't think they've made out a case for fees.  
23 I've been clear on that. But even if the Court wants to  
24 grant fees, I really think the number is between 7 and 8  
25 million. But if you were to go to 50 percent, if you were

1 to do 14.2 million, if you were to deny the injunction and  
2 cut the fees award in half, I would not have any motivation  
3 to take an appeal on the attorney's fees award.

4 Now, I've said before the scope of the remand  
5 lets you address every issue. So I think it's more than  
6 just the 50 percent reduction for what we're doing now. I  
7 think it's considering all of the factors in light of their  
8 limited success and now even more limited success. But we  
9 would be comfortable with that as a decision.

10 Thank you, Your Honor.

11 THE COURT: Thank you, Mr. Polsenberg.

12 MR. POLSENBERG: Mr. Pocker has used up his  
13 time, so he's going to let me leave this messy and clean up  
14 after the Court recesses.

15 THE COURT: All right.

16 MR. POCKER: Your Honor, I think I did go past  
17 45 minutes, and your staff -- 42 minutes. I have three  
18 minutes, Your Honor.

19 THE COURT: Well, let me see. By my notes you  
20 have five minutes left, if you'd like them.

21 MR. POCKER: Your Honor, what we've just seen  
22 demonstrates the sophistry and the creativity that is being  
23 used by the other side to come up with these different  
24 measures. I mean, even this degree of success with the  
25 salt shakers and the claims and all this stuff, well, if we

1 have 93 salt shakers in which we prevailed versus the 11  
2 that they prevail, it's all just a big game.

3 What the Court really needs to take into  
4 consideration on this is the fact that this was, as you  
5 declared, first and foremost, a copyright infringement  
6 case. It was tried as one, it was successfully tried as  
7 one, and they can talk about how, Oh, you only got 14  
8 percent of the numbers that were thrown around as damages  
9 and whatever, but the award in this case is substantial,  
10 significant, and evidences success.

11 And this notion that somehow you have to make an  
12 award so that people won't overplead their cases, the  
13 courts and the progress of litigation has a way of weeding  
14 that out.

15 And in most instances this is another case of no  
16 good deed goes unpunished. We decided to tailor our own  
17 case to come forward and say, Well, we're not going to have  
18 this claim, that claim, let's get a writ of trespass to  
19 chattels, and all of a sudden it's a salt shaker. All of a  
20 sudden it's a reason why, you know, we have failed utterly.  
21 We're not succeeding to the degree that we have.

22 When the Ninth Circuit says more limited  
23 success, they mean more than the already extraordinary  
24 success we've already had. And all of the talk about, Oh,  
25 you need to reduce this, you need to reduce that, this

1 Court already reduced by 20 percent the amount of fees that  
2 we were asking for.

3 We submit no further reduction is necessary.  
4 We've clearly demonstrated that everything we've spent was  
5 in connection with the claims on which we were highly  
6 successful.

7 And under the circumstances, this is a simple  
8 one, Your Honor. Simply reinstate the award that you made  
9 before. All the analysis he now wants you to do again you  
10 did two years ago, properly, successfully, and with the  
11 input of everybody in this room, and it still stands, and  
12 that number should still be the number.

13 THE COURT: All right. Thank you, Mr. Pocker.

14 Well, thank you, counsel. I appreciate the  
15 arguments on both sides, and I compliment counsel on the  
16 professionalism that has attached to all of this.

17 I would anticipate I'll get a written decision  
18 to you in a fairly short period in time, no more than two  
19 weeks on the outside as I sit here. But in any event, I  
20 will give you a decision soon. And I appreciate having you  
21 here. I appreciate seeing everyone again.

22 This certainly is an extensive case, and it has  
23 been pending for a long time. And I hope that we all look  
24 to its end in the near future.

25 I don't know what's going to happen with *Rimini*

1       II. But at least for this case, I want to see it wrapped  
2 up. So thank you very much for being here.

3               This session of court will be adjourned at this  
4 time.

5               And, Mr. Polsenberg, you can return Peg's salt  
6 and pepper shakers. But I appreciate the demonstration.

7               Thank you very much. The Court will be in  
8 recess.

9               COURTROOM ADMINISTRATOR: Please rise.

10              (The proceedings concluded at 4:28 p.m.)
